OUTLOOK:

\*\*\* A FIRE WEATHER WATCH IS POSTED IN CENTRAL UTAH FOR DRY LIGHTNING AND GUSTY THUNDERSTORM WINDS. \*\*\*

An upper level high pressure system will be over Colorado and monsoonal moisture will bring wet thunderstorm activity to New Mexico, Arizona, southern Colorado and southern Utah. Widely scattered, dry thunderstorms are forecast from northwestern Arizona, central and northeastern Utah into northwest Colorado. A few thunderstorms may spill over into southern Wyoming and southern Nevada.

A thermal low pressure area will develop over Nevada, Utah and northern Arizona bringing near red flag conditions for gusty southwest winds to western Nevada. A strengthening westerly pressure gradient over the Sierra Nevada and southern Cascades will generate windy conditions over the eastern slopes. Near red flag conditions will occur in northeastern California for gusty southwest winds. Wind speeds will be 15 to 25 MPH gusting to 35 MPH over western Nevada and northern California east of the Sierra crest.

The rest of the West will have mostly sunny skies. Temperatures will range from the 60's and 70's in the Northwest Pacific coast to the 80's and 90's over inland areas and 105 to 112 in the hottest southwestern deserts.
