OUTLOOK

A low pressure trough will be nearing the coast of Northern California. This will bring clouds and a chance of showers and thunderstorms to the region. Temperatures will be 60 near the coast and mid 70s to 90 inland. Minimum relative humidity will be 18 to 33 percent, with winds southeast to south at 5 to 15 mph.

In Southern California, a low pressure trough will bring cooling and some clouds to the region, with a chance of thunderstorms over the Sierra's. Temperatures will be in the 60s to 70s near the coast with 80s inland and 90s in the deserts. Minimum relative humidity will be 10 to 30 percent with winds southeast to southwest at 10 to 20 mph.

High pressure continues to dominate the Pacific Northwest, with the exception of a weak upper level low pressure system influencing the extreme southern end of Oregon. Temperatures will remain in the 70s and 80s over most of the region, with a few 90 reading in southwest and eastern Oregon desert areas. Minimum relative humidity will be in 15 to 20 percent in the interior, with areas of single digit readings east of the Cascades. Winds will be variable at 5 to 15 mph.

A weak southerly flow aloft will bring a slight increase in moisture over the Eastern Great Basin area. Weather conditions will be sunny, with a chance of isolated afternoon, mainly dry thunderstorms over the Utah mountains and near the Idaho-Nevada border. Temperatures in southern Idaho will be in the mid 70s to upper 80s in the lower elevations, with mid 60s to upper 70s in the mountains. Utah will see mainly 80s to mid 90s over the lower elevations, with 70s in the mountains. Minimum relative humidity will be 5 to 18 percent. Winds in southern Idaho will be southwest at 5 to 15 mph, and in Utah southwest 10 to 20 mph, with some gusts of 20 to 30 mph.
