**INCIDENT MANAGEMENT SITUATION REPORT  
FRIDAY, JANUARY 25, 2002- 1000 MST  
NATIONAL PREPAREDNESS LEVEL 1**

**CURRENT SITUATION:**

Initial attack activity was moderate in the Southern Area and light in Southern California, Southwest and Rocky Mountain Areas. Two large fires were reported this week in the Southern California and Rocky Mountain Areas. The Kansas fire was contained this week. Prescribed burning projects continued in Northern and Southern California, the Southwest and Southern Areas. Very high fire indices were reported in Texas.

**SOUTHERN CALIFORNIA LARGE FIRES:**

HOLY, Cleveland National Forest. A Type 2 Incident Management Team (Dietrich) is assigned and will transition with the local district today. The fire is 15 miles east of Irvine, California. Fire continues to be held east of Holy Canyon Road.

KSS = Kansas State Forestry

**OUTLOOK:**

An area of low pressure is forecast to move eastward through the southern tier states of the Eastern Area, Friday into Saturday producing fairly significant snowfall amounts across mainly the southern portions of Missouri, Illinois, Indiana and Ohio. The low will then move northeast through the mid-Atlantic states and up the Atlantic seaboard Saturday into Sunday creating additional areas of significant snow over much of the eastern mid-Atlantic and New England states. Some of the precipitation may fall as a mixture of snow, freezing rain and sleet at times, especially over Maryland and eastern Virginia. Another weaker area of low pressure will advance through the Great Lakes region on Sunday into Monday producing areas of light snow over the area. Temperatures early next week are expected to climb above normal levels across much of the area.

Medium range computer models are developing a surface low over the Central Plains by mid-week. This low is then forecast to strengthen considerably towards the end of next week as it moves northeast through the lower Ohio Valley and up into the eastern Great Lakes region.

High pressure builds into Texas and Oklahoma for a cooler, drier period lasting through Tuesday. The next system will pass across the southeast with rain expected through Thursday, along with the possibility for some light snow on the backside of the system in Arkansas, Kentucky, east Tennessee and west Virginia. Highs will range in the 50's and 60's, with some 70's in south Texas and central Florida. After the late month system, temperatures will cool rather dramatically with highs only in the 30's and 40's in Kentucky, Tennessee, Arkansas, Oklahoma, and north Texas. 60's will be seen along the Gulf and Atlantic coast with 70's confined to Florida. Minimum relative humidity will fall below 35 percent over much of the area this weekend, but will gradually recover beginning Monday. South winds at 15 to 25 mph may develop over Oklahoma beginning of Sunday, otherwise winds will be 10 mph or less. Southerly winds are expected to dominate through Wednesday and northerly thereafter. Rainfall will be spotty over Florida during January 26-28, but the late month system could produce an inch or more from central Tennessee to eastern Kentucky. Good rains in excess of half an inch are expected from Louisiana to western Virginia as January comes to a close. Colder temperatures are expected as February begins and low pressure heads into the mid-Atlantic region.
