

**INCIDENT MANAGEMENT SITUATION REPORT
SATURDAY, JUNE 22, 2002 0800 MDT
NATIONAL PREPAREDNESS LEVEL 5**

CURRENT SITUATION:

Initial attack activity was moderate in the Southwest and Western Great Basin Areas and light elsewhere. Nationally, 204 new fires were reported. Three of these became large fires, two in the Southwest Area and one in the Eastern Great Basin Area. Four large fires were contained, three in the Southern California Area and one in the Southwest Area. Very high to extreme fire indices were reported in Alaska, Arizona, California, Colorado, Kansas, Nevada, New Mexico, Oklahoma, Texas, Utah and Wyoming.

A Grayback Forestry Incorporated crew on contract with the United States Forest Service was involved in a one vehicle accident near Parachute, CO yesterday while mobilizing to the Hayman fire. Four crew members were fatally injured. The firefighting community extends condolences to the family and friends of the deceased.

ROCKY MOUNTAIN AREA LARGE FIRES:

Priorities are being established by the Rocky Mountain Multi-Agency Coordinating Group based on information submitted via Wildland Fire Situation Analysis reports and Incident Status Summary (ICS-209) forms. An Area Command Team (Mann) is assigned to manage the Hayman fire.

MISSIONARY RIDGE, San Juan National Forest. A transfer of command from Ferguson's Type 1 Incident Management Team to Bennett's Type 1 Incident Management Team occurred this morning. This fire is 15 miles northeast of Durango, CO and is burning in gambel oak, ponderosa pine and mixed conifer forest. Sustained crowning runs with 150 foot flame lengths, torching and spotting up to 3/4 mile ahead of the front were observed on the southeast, southwest and east flanks. Scattered, light precipitation fell in the fire area. Crews are building indirect attack fireline along the southeast and southwest perimeters in preparation for a burn out. Eighteen subdivisions south of Lemon and Vallecito Reservoirs and along State Route 250 remain evacuated. An evacuation center is open in Bayfield. A structural damage assessment group is reporting 12 residences confirmed lost.

HAYMAN, Pike-San Isabel National Forest. Three Type 1 Incident Management Teams (Frye, Raley and Vail) are assigned. Vail's team, in coordination with local officials in El Paso County, has completed preparation of contingency and structure protection plans. The Secretary of Agriculture, Ann Venneman, visited the incident yesterday. This fire is burning six miles northwest of Lake George, CO in ponderosa pine, gambel oak and mixed conifer forest. Precipitation moderated fire behavior, with isolated torching and limited spotting observed. Crews are constructing direct attack handline with the support of aerial resources and burning out where necessary. Approximately 2,368 residents remain evacuated; no new evacuations occurred yesterday. Evacuation centers are open in Park, Douglas, Teller and Jefferson Counties. Residents in Jefferson and Douglas Counties were allowed to return to their homes but are on alert

to evacuate again if conditions warrant. An additional 35 residences and ten outbuildings were confirmed lost. The four counties continue to evaluate structure loss. Highway 67 is closed.

MILLION, Rio Grande National Forest. A Type 1 Incident Management Team (Gelobter) is assigned. This fire is burning two miles south of South Fork, CO in ponderosa pine, bug kill spruce and mixed conifer forest. Moderate to minimal fire activity was observed. Crews and dozers are constructing fireline. Residents of the four subdivisions near South Fork have been allowed to return to their homes but are on alert to evacuate again if conditions warrant. The evacuation center in Del Norte remains operational. A revised evaluation of lost structures indicated eleven residences and two outbuildings were lost during the initial phases of the fire.

HENSEL, Medicine Bow National Forest. A transfer of command from Rios' Type 2 Incident Management Team to Wood's Type 1 Incident Management Team will occur today. This fire is burning in bug kill ponderosa pine 20 miles northwest of Wheatland, WY. Active fire behavior was observed on the northwest flank. Crews and dozers are constructing indirect attack fireline on the north, south and west flanks. Air tanker operations were suspended due to high winds. Residents from the northern portion of Cottonwood Park remain evacuated and structure protection is in place.

COAL SEAM, Grand Junction Dispatch Center Area Counties. A Fire Use Management Team (Cook) is assigned. This fire is burning four miles west of Glenwood Springs, CO in gambel oak, decadent spruce, fir and aspen. Torching was observed on the northwest perimeter. A confinement strategy is being utilized on the north flank due to extremely steep and dangerous terrain. Completed fireline has forced the fire north into areas of low spread potential. Crews are mopping up completed fireline.

SOUTHWEST AREA LARGE FIRES:

Priorities are being established by the Southwest Multi-Agency Coordinating Group based on information submitted via Wildland Fire Situation Analysis reports and Incident Status Summary (ICS-209) forms.

RODEO, Bureau of Indian Affairs, Fort Apache Agency. A Type 1 Incident Management Team (Humphrey) is assigned. This fire is burning in ponderosa pine, juniper and brush three miles north of Cibecue, AZ. Extreme fire behavior with 100 to 200 foot flame lengths and spotting were observed as the fire advanced north, east and west. Dozers and crews are creating defensible space around threatened structures. Pinedale, Clay Springs and Linden remain evacuated and a structural damage assessment group is evaluating losses. Show Low, Lakeside, Pinetop, Hon Dah and a major power line are threatened. Evacuation centers are open in Holbrook and Winslow. Highway 260 is closed.

CHEDISKI, Bureau of Indian Affairs, Fort Apache Agency. A Type 2 Incident Management Team (Kvale) is assigned. A Type 1 Incident Management Team (Dash) has been ordered. This fire, burning in chaparral, ponderosa pine, juniper and pinyon pine, is 12 miles southwest of Heber, AZ. Strong southwest winds resulted in moderate to extreme fire behavior. The fire is spreading northeast, approaching the Mogollon Rim. Crews, engines and dozers anchored at the heel of the fire and initiated direct and indirect attack fireline construction along the southwest and southeast flanks. Heber and Overgaard were evacuated to centers in Winslow and Holbrook. Structure protection groups are creating defensible space around residences. Power lines and sacred Apache sites are threatened.

ROYBAL/TRAMPAS, Santa Fe National Forest. A Type 1 Incident Management Team (Bateman) is assigned. The Roybal fire is four miles northeast of Pecos, NM and the Trampas fire is in the Pecos Wilderness Area, eight miles west of Rociada, NM. The fires are burning in ponderosa pine and mixed conifer forest. Roybal has been contained. Precipitation resulted in minimal fire behavior on Trampas. Crews are improving fireline on the south flank and building handline on the southeast flank. Four structure protection groups are creating defensible space around threatened structures.

ALAMEDA, New Mexico State Forestry Office, Socorro District. This fire is burning in pinyon pine, juniper and grass 14 miles southwest of Magdalena, NM. Personnel are mopping up.

WALKER, Coronado National Forest. A Unified Command between the US Forest Service and the government of Nogales, Sonora Mexico is in place. The fire is burning in oak woodland, mesquite and grass on both sides of the US-Mexico border, west of Nogales, AZ. No visible smoke was observed on the US portion of the fire. Mexican crews are constructing fireline along the west flank.

SOUTHERN CALIFORNIA AREA LARGE FIRES:

WILDWOOD, Angeles National Forest. A Type 2 Incident Management Team (Walker) is assigned. This fire is in Big Tujunga Canyon, four miles north of La Crescentia, CA. Minimal fire activity was observed due to fog and drizzle. Crews are constructing fireline and mopping up. Reduction in acreage is due to better mapping.

BLUECUT, San Bernardino National Forest. A Type 1 Incident Management Team (Studebaker) is

assigned. This fire is one mile north of the Interstate 15 and Interstate 215 junction near the community of Oak Hills, CA. Creeping and smouldering were observed in heavy chaparral. Crews are building direct attack fireline, mopping up and patrolling.

 LPF = Los Padres National Forest

WESTERN GREAT BASIN AREA LARGE FIRES:

Priorities are being established by the Great Basin Multi-Agency Coordinating Group based on information submitted via Wildland Fire Situation Analysis reports and Incident Status Summary (ICS-209) forms.

CANNON, Humboldt-Toiyabe National Forest. A Type 1 Incident Management Team (Stutler) is assigned. This fire is burning in sagebrush, ponderosa pine and mixed conifer forest 25 miles northwest of Bridgeport, CA. The fire continues to advance south. Running, torching and crowning were observed yesterday during the morning hours, moderating during the afternoon due to precipitation. Crews are constructing direct attack fireline on the south flank. Highway 395 is closed.

CANNON	NV	HTF	25,000	45	UNK	1,431	41	113	8	4	3.3M

EASTERN GREAT BASIN AREA LARGE FIRES:

Priorities are being established by the Great Basin Multi-Agency Coordinating Group based on information submitted via Wildland Fire Situation Analysis reports and Incident Status Summary (ICS-209) forms.

WILDHORSE COMPLEX, Bureau of Indian Affairs, Uintah and Ouray Agency. This complex, comprised of the Wildhorse and Papoose fires, is 54 miles south of Fort Duchesne, UT. High winds contributed to running, torching and short range spotting in pinyon pine and juniper. Crews are flanking the fires with handline. Steep, rough terrain, limited access and erratic winds are impeding containment efforts.

SANFORD, Dixie National Forest. A Type 2 Incident Management Team (Suwyn) is assigned. A Fire Use Management Team (Cones) remains on the incident to assist with fire management. The fire is being managed by the most meaningful, most cost efficient alternative under the Wildland Fire Situation Analysis (WFSA) confinement/containment strategy. Priorities are firefighter and

public safety, economics of suppression and ecosystem health. The fire is 20 miles northeast of Panguitch, UT and is burning in aspen, pinyon pine, juniper and mixed conifer forest. Torching, spotting and short runs were observed. Crews are constructing direct attack handline on the south and west flanks and indirect attack handline east from Dutton Peak. High winds and low relative humidity are hampering confinement efforts. Structure protection is in place at Sanford Ranch.

RATTLE, Bureau of Land Management, Moab Field Office. This fire is 20 miles northeast of Green River, UT. Backing and short upslope runs were observed in oak brush, mountain mahogany, pinyon pine, Douglas fir and ponderosa pine. Steep, rugged terrain, drought conditions and limited access are hampering containment efforts. Aerial resources were instrumental in slowing the fire's spread.

RATTLE	UT	MOD	150	5	6/30	13	0	0	1	0	NR

SOUTHERN AREA LARGE FIRES:

BLACKJACK BAY COMPLEX, Okefenokee National Wildlife Refuge. A Unified Command between an interagency Fire Use Management Team (Zimmerman), the Georgia Forestry Commission, the Florida Division of Forestry and the National Forests of Florida is in place. This lightning-caused complex, consisting of the Blackjack 02, Bay Creek and Number One Island fires, is ten miles northeast of Fargo, GA. The complex is being managed by the most cost efficient alternative under the Wildland Fire Situation Analysis (WFSA) confinement/containment strategy. Priorities are firefighter and public safety, economics of suppression and ecosystem health. Cloud cover and higher relative humidity contributed to moderate fire activity. A ten mile section of preexisting permanent fuel break surrounding the Refuge has been successfully utilized to hold the fires. Crews are mopping up and patrolling the fuel break.

OUTLOOK:

*****A RED FLAG WARNING HAS BEEN POSTED ON THE EAST SIDE OF THE CONTINENTAL DIVIDE IN NORTHERN COLORADO AND SOUTH-CENTRAL WYOMING FOR STRONG SOUTHWEST WINDS, VERY LOW RELATIVE HUMIDITY AND HIGH HAINES INDEX*****

*****A FIRE WEATHER WATCH HAS BEEN ISSUED ON THE EAST SIDE OF THE CONTINENTAL DIVIDE IN SOUTHERN COLORADO FOR STRONG SOUTHWEST WINDS, VERY LOW RELATIVE HUMIDITY AND HIGH HAINES INDEX*****

A low pressure system moving into the Rocky Mountain Area will bring scattered showers and thunderstorms to the northern portion of the region. Isolated dry thunderstorms are forecast for the western Colorado mountains. High temperatures will be in the 60's and 70's in the mountains and in the 80's and 90's at lower elevations. Minimum relative humidity will range from the single digits to 20 percent in Colorado and southern Wyoming, and 20 to 35 percent in the remainder of the area. Winds will be southwest at 10 to 20 mph in western Colorado, and 15 to 30 mph with gusts to 40 mph in the Red Flag and Fire Weather Watch areas.

The Southwest Area can expect sunny skies in Arizona and western New Mexico and partly cloudy skies with scattered wet thunderstorms in eastern New Mexico and west Texas. Isolated dry thunderstorms are forecast in the north-central mountains of New Mexico. High temperatures will be in the 70's and 80's in the mountains, and in the 90's to 105 at lower elevations. Minimum relative humidity will range from 5 to 15 percent in Arizona and western New Mexico and 25 to 40 percent elsewhere. Winds will be southwest at 10 to 15 mph with gusts to 25 mph in Arizona and western New Mexico. In eastern New Mexico and west Texas, winds will be south to southeast at 15 to 25 mph.

High pressure will build over the Southern California Area, bringing sunny skies with morning low clouds and fog along the coast. High temperatures will be upper 60's and 70's along the coast, in the 70's to low 80's in the mountains, in the 80's inland, and in the 90's to 108 in the deserts. Minimum relative humidity will range from 15 to 25 percent in the mountains and deserts, 30 to 40 percent in the valleys, and above 55 percent near the coast. Winds will be southwest to northwest at 10 to 20 mph over the mountains and deserts. Near the coast, winds will be onshore at 8 to 16 mph.

Mostly sunny skies are expected in the Western Great Basin Area. High temperatures will be in the 80's and 90's. Minimum relative humidity will range from 7 to 25 percent and winds will be west to northwest at 5 to 15 mph.

The Eastern Great Basin Area can expect mostly sunny skies in the south and partly cloudy skies with a chance of showers and thunderstorms in the north. High temperatures will be 80 to 100 in southern Utah and 75 to 85 elsewhere. Minimum relative humidity will range from 7 to 22 percent in southern Utah and the Arizona strip, and 18 to 40 percent in southern Idaho, northern Utah and the Bridger-Teton National Forest. Winds will be southwest to northwest at 10 to 20 mph.

A trough of low pressure moving slowly across the Southern Area will bring partly cloudy skies and

rain showers. High temperatures will be in the 70's and 80's in areas influenced by the front and in the 80's and 90's elsewhere. Minimum relative humidity will be above 60 percent in most areas. Winds will be east to southeast at 10 to 20 mph in the western portion of the region.

www.nifc.gov/sixminutes/index_j.asp

ON A HILLSIDE WHERE ROLLING MATERIAL CAN IGNITE FUEL BELOW

When firefighters find themselves in Watchout Situation #13, they must answer the following questions:

- Can you locate/construct fireline to prevent material from rolling below? What do you call line that catches rolling material? Describe how you would construct this type of line and what factors you would have to consider (e.g., slope, fuels, etc.)
- Will you get enough warning of rolling material to prevent being hit by it? Who needs to be watching for rolling material? What kinds of warning systems could you establish?
- Can you see where any material that rolls below you goes and what it does? What can happen when material rolls out of the fire and below you out of view? What needs to be done to mitigate this danger?
- Is the area free of large amounts of flashy fuels? Review the Common Denominators of Tragedy Fires.
- Is the area free of chimneys, gullies, and steep slopes? Review the Common Denominators of Tragedy Fires.
- Do you have two escape routes so you can go either way? Talk about where your most likely escape routes and safety zones will be when you are on a hillside where rolling material can ignite fuel below.
- To reduce the risks:

_____ Post lookouts.

Consider locating line in a defensible position. Talk about steep fires where you have had material rolling out below you and how you dealt with it.
