

**INCIDENT MANAGEMENT SITUATION REPORT
FRIDAY, JUNE 28, 2002 0530 MDT
NATIONAL PREPAREDNESS LEVEL 5**

CURRENT SITUATION:

Initial attack activity was moderate in the Rocky Mountain, Eastern Great Basin, Northern California and Northwest Areas, and light elsewhere. Nationally, 199 new fires were reported. Two of these became large fires, one each in the Rocky Mountain and Northwest Areas. Three large fires were contained, one each in the Northwest, Eastern Great Basin and Southern Areas. Very high to extreme fire indices were reported in Arizona, California, Colorado, Kansas, Nevada, New Mexico, Oklahoma, Texas, Utah and Wyoming.

The 146th Air Expeditionary Group (Provisional), under the command of Brigadier General John Iffland, is conducting Modular Airborne Fire Fighting System (MAFFS) operations, supporting the National Interagency Fire Center wildland fire suppression effort. Two C-130H3 aircraft from the 302nd Air Wing, US Air Force Reserve, four C-130H3 aircraft from the 145th Air Wing, North Carolina Air National Guard and a joint 302nd/145th support group have been deployed to conduct air tanker missions at Peterson Field, Colorado. Lieutenant Colonel Ted Wright is the immediate commander for the deployed aircraft.

SOUTHWEST AREA LARGE FIRES:

Priorities are being established by the Southwest Multi-Agency Coordinating Group based on information submitted via Wildland Fire Situation Analysis reports and Incident Status Summary (ICS-209) forms. An Area Command Team (Ribar) is assigned to manage the Rodeo/Chediski complex.

RODEO/CHEDISKI COMPLEX, Fort Apache Agency, Bureau of Indian Affairs. Four Type 1 Incident Management Teams (Humphrey, Bateman, Dash, and Martin) are assigned. The fires are burning in chaparral, ponderosa pine, juniper and brush three miles north of Cibecue, AZ. Very active fire behavior, aggressive backing against the wind and flanking were observed. The fire spotted across containment lines on the southwest flank in the Carrizo and Cibecue areas. Forces redeployed and are constructing indirect attack fireline in preparation for a burn out. Crews successfully held the east flank in Cottonwood Canyon and along Highway 60, preventing fire spread into Pinetop, Lakeside and communities to the east. A secondary line north and west of Cibecue is complete and burn out operations are underway. Show Low, Pinedale, Lakeside, Clay Springs, Pinetop, Hon Dah, Linden, Overgaard, Heber and surrounding populated areas remain evacuated; structure protection is in place. Evacuation centers are open in Winslow and Holbrook. Damage assessment groups are evaluating structure loss and will report information as it is confirmed. Highways 60, 260 and 277 are closed.

ROYBAL/TRAMPAS, Santa Fe National Forest. The Roybal fire is four miles northeast of Pecos, NM and the Trampas fire is in the Pecos Wilderness Area, eight miles west of Rociada, NM. The fires are burning in ponderosa pine and mixed conifer forest. Precipitation contributed to minimal

fire activity. Crews are mopping up numerous hot spots on the east flank in very steep, rugged terrain and are constructing fireline and mopping up on other divisions.

TEJON, Las Vegas District, New Mexico State Forestry Office. This fire is two miles northwest of Vaughn, NM. No further information was reported.

INCIDENT NAME	ST	UNIT	SIZE	% CTN	EST CTN	TOTL PERS	CRW	ENG	HELI	STRC LOST	\$\$\$ CTD
RODEO/CHEDISKI COMPLEX	AZ	FTA	417,000	10	UNK	4,323	109	239	19	423	14M
ROYBAL/TRAMPAS	NM	SNF	5,666	60	UNK	205	6	5	3	0	5.5M
TEJON	NM	N2S	7,420	40	6/28	5	0	3	0	0	3K

ROCKY MOUNTAIN AREA LARGE FIRES:

Priorities are being established by the Rocky Mountain Multi-Agency Coordinating Group based on information submitted via Wildland Fire Situation Analysis reports and Incident Status Summary (ICS-209) forms. An Area Command Team (Mann) is assigned to manage the Hayman fire. An additional Area Command Team (Chesley) is assigned to manage the Missionary Ridge fire.

MISSIONARY RIDGE, San Juan National Forest. Two Type 1 Incident Management Teams (Hart and Bennett) are assigned. Bennett's team is also managing the Valley incident. Missionary Ridge is five miles northeast of Durango, CO and Valley is adjacent to and west of US Highway 550. The fires are burning in gambel oak, ponderosa pine and mixed conifer forest. Isolated torching and moderate fire behavior were observed. Crews successfully suppressed a slopover on the Valley incident when winds from a passing thunder cell caused the fire to spot across containment lines on the north flank. Crews are constructing fireline and burning out the southwest flank of Missionary Ridge. Personnel are patrolling and mopping up divisions with completed fireline. A temporary evacuation of homes north of Vallecito Reservoir occurred yesterday due to fire growth and erratic winds. Nine subdivisions along State Route 250 remain evacuated to the center in Bayfield. A damage assessment group is evaluating structure loss and will report information as it is confirmed.

SPRING CREEK, White River National Forest. A Type 2 Incident Management Team (Hartman) is assigned. This fire is burning in spruce eight miles north of New Castle, CO. Spotting, torching and short runs were observed as the fire advanced northeast and south. Steep, inaccessible terrain, long term drought, low relative humidity, and erratic winds are impeding suppression efforts. Crews are burning out on the west side of Elk Drainage. Personnel are holding fireline in Spring Creek and on a large spot fire with the support of aerial resources.

HAYMAN, Pike-San Isabel National Forest. A transfer of command from Frye's Type 1 Incident Management Team to Lohrey's Type 1 Incident Management Team will occur today. This fire is six miles northwest of Lake George, CO. Creeping and smouldering were observed in ponderosa pine, gambel oak and mixed conifer forest. Crews are improving, mopping up and rehabilitating fireline on the north, south and east flanks. Residents of Trout Creek, West Creek, and Painted Rocks were allowed to return to their homes. Reoccupation of evacuated areas is nearly complete. Park, Douglas, Teller and Jefferson Counties are assessing structure loss and will report information as it is confirmed.

WEST BEAVER, Grand Mesa-Uncompahgre-Gunnison National Forest. A Type 2 Incident Management Team (Sisk) is assigned. This fire is 15 miles south of Norwood, CO. Active fire behavior with single tree torching was observed in spruce, fir and aspen. Steep, rugged terrain, numerous snags, and heavy dead and downed fuels is impeding containment efforts. Crews made good progress constructing direct attack fireline.

MILLION, Rio Grande National Forest. A Type 1 Incident Management Team (Gelobter) is assigned. This fire is burning two miles south of South Fork, CO in ponderosa pine, bug kill spruce and mixed conifer forest. Minimal fire activity was observed. Crews and dozers are improving completed fireline and hot-spotting. Engines are patrolling and mopping up. Dozer line rehabilitation is underway.

HENSEL, Medicine Bow National Forest. A Type 1 Incident Management Team (Wood) is assigned. This fire is burning in bug kill ponderosa pine 20 miles northwest of Wheatland, WY. Isolated torching and occasional short crown runs were observed. Very steep, dangerous terrain in the remaining area of unsecured perimeter has mandated the use of aerial resources to limit fire spread.

PINYON RIDGE, Craig District, Bureau of Land Management. A Type 2 Incident Management Team (Chrisman) is assigned. This fire is burning 28 miles northwest of Meeker, CO in pinyon pine and juniper. Significant torching was observed on the southwest flank and active fire behavior was observed along the south-southeast perimeter. Crews made good progress constructing direct attack handline along the west flank. Aerial resources are being utilized on the southeast flank to slow fire spread into McAndrews Gulch. Engines are patrolling and mopping up completed fireline.

COAL SEAM, Grand Junction Dispatch Center Area Counties. A Fire Use Management Team (Cook) is assigned to manage suppression operations and develop long term assessments. A confinement strategy is being utilized on the north flank due to extremely steep and dangerous terrain. This fire is burning four miles west of Glenwood Springs, CO in spruce, subalpine fir and aspen. Completed fireline has forced the fire north into areas of low spread potential where aspen stands are projected to limit fire spread for three to four weeks. Smouldering and creeping were observed in unburned islands. The crew completed fireline rehabilitation above Interstate 70. Personnel are mopping up with support from aerial resources and monitoring fire activity on the northern perimeter.

BEAR, Dinosaur National Monument. This wind-driven fire is burning in sagebrush, pinyon pine and juniper 20 miles northeast of Dinosaur, CO on the Yampa River bench. Extreme fire behavior, running, torching and spotting were observed. Crews are constructing fireline along the south flank and hot-spotting with the support of aerial resources.

EASTERN GREAT BASIN AREA LARGE FIRES:

Priorities are being established by the Great Basin Multi-Agency Coordinating Group based on information submitted via Wildland Fire Situation Analysis reports and Incident Status Summary (ICS-209) forms.

RATTLE COMPLEX, Moab Field Office, Bureau of Land Management. A Type 2 Incident Management Team (Shell) is assigned. This complex, consisting of the Diamond Creek and Rattle fires, is 20 miles northeast of Green River, UT. Sustained crowning runs and medium range spotting were observed in oak brush, mountain mahogany, pinyon pine, Douglas fir and ponderosa pine. Crews successfully burned out a portion of the west flank on Diamond Creek. Extreme drought conditions, rugged terrain and limited access are impeding containment efforts.

SANFORD, Dixie National Forest. A Type 2 Incident Management Team (Suwyn) is assigned. The fire is being managed by the most cost efficient alternative under the Wildland Fire Situation Analysis confinement/containment strategy. Priorities are firefighter and public safety, economics of suppression and ecosystem health. The fire is 20 miles northeast of Panguitch, UT and is burning in aspen, pinyon pine, juniper and mixed conifer forest. Minimal fire activity was observed. Crews are constructing direct attack handline on the south and west flanks and mopping up spot fires near Dutton Peak. Structure protection is in place at Sanford Ranch.

WILDHORSE COMPLEX, Uintah and Ouray Agency, Bureau of Indian Affairs. This complex, comprised of the Wildhorse and Papoose fires, is 54 miles south of Fort Duchesne, UT. Short upslope runs were observed in Douglas fir, pinyon pine, juniper and sagebrush. Erratic winds are hampering containment efforts. Aerial resources have been instrumental in slowing fire spread on the southwest flank in very steep, rugged terrain.

INCIDENT NAME	ST	UNIT	SIZE	% CTN	EST CTN	TOTL PERS	CRW	ENG	HELI	STRC LOST	\$\$\$ CTD

BOD = Lower Snake River District, Bureau of Land Management

SOUTHERN CALIFORNIA AREA LARGE FIRES:

LOUISIANA, San Bernardino National Forest. A Type 2 Incident Management Team (Walker) is assigned. This fire, burning in heavy chaparral, is nine miles north of Devore, CA. Active running was observed. Crews are constructing handline and engines are providing structure protection. Lone Pine, Baldy Mesa, West Cajon Valley, Wrightwood, Oak Hills and residences in Swarouth Canyon are threatened. Interstate 15 has been reopened and Highway 138 is closed. Three residences and three outbuildings were lost during the initial phases of the fire.

WESTERN GREAT BASIN AREA LARGE FIRES:

Priorities are being established by the Great Basin Multi-Agency Coordinating Group based on information submitted via Wildland Fire Situation Analysis reports and Incident Status Summary (ICS-209) forms.

CANNON, Humboldt-Toiyabe National Forest. This fire is burning in sagebrush, ponderosa pine and mixed conifer forest 25 miles northwest of Bridgeport, CA. Fire activity was limited to interior burning. Crews are patrolling and mopping up.

INCIDENT NAME	ST	UNIT	SIZE	% CTN	EST CTN	TOTL PERS	CRW	ENG	HELI	STRC LOST	\$\$\$ CTD
CANNON	NV	HTF	22,750	95	6/28	211	7	0	3	4	7.8M

SOUTHERN AREA LARGE FIRES:

BLACKJACK BAY COMPLEX, Okefenokee National Wildlife Refuge. This lightning-caused complex, consisting of the Blackjack 02, Bay Creek and Number One Island fires, is ten miles northeast of Fargo, GA. The complex is being managed by the most cost efficient alternative under the Wildland Fire Situation Analysis confinement/containment strategy. Priorities are firefighter and public safety, economics of suppression and ecosystem health. Precipitation has raised swamp water levels, minimizing fire activity. Personnel are monitoring fire behavior and rehabilitating roads in the area.

OUTLOOK:

The Southwest Area can expect partly to mostly sunny skies with scattered dry thunderstorms across eastern Arizona and western New Mexico. A chance of wet thunderstorm activity is forecast in eastern New Mexico and west Texas. High temperatures will be in the 80's in the mountains and near 110 at lower elevations. Minimum relative humidity will range from 5 to 15 percent in Arizona and western New Mexico and 20 to 40 percent elsewhere. Winds will be southwest at 5 to 15 mph in Arizona and western New Mexico with gusts to 20 mph, and east to southeast at 10 to 15 mph in the remainder of the area.

Upper level low pressure will bring unstable air to the Rocky Mountain Area, contributing to widely scattered wet thunderstorms east of the Continental Divide. Isolated, mainly dry thunderstorms are forecast west of the Divide. High temperatures will be in the 70's and 80's in the mountains and mid 80's to mid 90's at lower elevations. Minimum relative humidity will be in the single digits at lower elevations in western Colorado and 12 to 20 percent elsewhere. Winds will be southeast at 10 to 20 mph east of the Divide and southwest at 8 to 18 mph in the remainder of the area.

An increasing southwest flow over the Eastern Great Basin Area will bring mostly sunny skies with isolated, mainly dry thunderstorms over the mountains of Idaho and northern Utah. High temperatures will be in the 80's to 95 in the mountains and 92 to 105 in the valleys. Minimum relative humidity will range from 10 to 25 percent at higher elevations and 6 to 18 percent at lower elevations. Winds will be southwest at 10 to 20 mph with gusts to 30 mph in the western deserts.

The Southern California Area can expect mostly sunny skies with morning low clouds and fog along the coast. High temperatures will be upper 60's and 70's in coastal areas, upper 70's and 80's in the mountains and inland valleys, and low 90's to 110 in the deserts. Minimum relative humidity will range from 5 to 15 percent in the deserts, 15 to 35 percent in the mountains, 30 to 45 percent in the valleys, and above 45 percent near the coast. Winds will be onshore at 7 to 12 mph in coastal areas and west to southwest at 10 to 20 mph elsewhere.

High pressure over the Western Great Basin Area will bring sunny skies with isolated thunderstorms in northeast and west-central Nevada. High temperatures will be upper 80's and 90's in the north and 100 to 110 in the south. Minimum relative humidity will range from the single digits to teens. Winds will be west to southwest at 5 to 20 mph.

The Southern Area can expect partly to mostly cloudy skies with scattered showers and thunderstorms along a stationary cold front in the Tennessee Valley. High temperatures will be in the 80's and minimum relative humidity will be above 50 percent. Winds will be northwest to southwest at 5 to 10 mph.

<u>EXTENDED ATTACK</u>	
<u>After your initial sizeup of the fire and/or transfer of command from an initial attack IC, answer the following questions. Repeat this analysis whenever there is a change, or predicted change, in fire conditions.</u>	
	<u>Do you have a current fire weather forecast for the fire location?</u>
	<u>Is the observed fire weather consistent with the forecast?</u>
	<u>Have you established a new organizational structure and communicated it to the other forces associated with the fire?</u>
	<u>Can you control the fire with the resources available (either on the incident or soon to be on scene) under expected conditions?</u>
	<u>Have you developed a plan to attack the fire?</u>
	<u>Direct or indirect</u>
	<u>Anchor points</u>
	<u>Escape routes</u>
	<u>Head or flank attack</u>
	<u>Priority areas</u>
<u>Have you communicated this to all personnel assigned to the incident, including new arrivals?</u>	
	<u>If you are using the black as a safety zone, is it completely burned and without a reburn potential?</u>
	<u>Are all safety measures and the Ten Standard Fire Orders being followed?</u>
	<u>Will you contain the fire before the next operational period?</u>

	<u>Have you reported the status of the fire to dispatch?</u>
	<u>Do you have a complete list of what resources have been ordered for the fire?</u>
