OUTLOOK:

Weather Discussion: Low pressure developing off the coast of the northwest coast will push some mid-level moisture into northern California and southern Oregon today. As daytime heating progresses, isolated thunderstorms are possible in the Sierras and Oregon Cascades as this moisture moves onto the coast. The rest of the West will remain under a strengthening high pressure system. In Alaska, low pressure will continue the threat of scattered showers and provide cool temperatures.

Some cumulus buildups over the higher terrain with a few isolated thundershowers possible south central Oregon.	70s to mid 80s western Washington. 90s southwest Oregon. High 80s to mid 90s eastern Oregon and Washington.	West of the Cascades: 30 to 50% north. 20 to 40% southwest Oregon. East of the Cascades: 10 to 20%. UNFAMILIAR WITH WEATHER AND LOCAL FACTORS INFLUENCING FIRE BEHAVIOR

- Can you ask questions of local experts? What kinds of questions would you ask?
- Does the operational period plan give you adequate weather and information? What kinds of weather forecasts can you get? What other weather or local information do you look for in the shift plan?
- Can you get information from resources that have been on the fire? What questions will you ask of the crew that you are replacing?
- Is there any other way to obtain information? List common sources of information on weather and local factors.
- To reduce risks:
 - Base all actions on current and expected fire behavior.
 - Post lookouts.
 - Establish escape routes and safety zones.
 - Take extra caution! Discuss a fire where you relied on information from the local unit (perhaps where your fire knowledge and experience was very different from how they did things — Southeast or Alaska).
