

**INCIDENT MANAGEMENT SITUATION REPORT
FRIDAY, FEBRUARY 25, 2005 – 1000 MST
NATIONAL PREPAREDNESS LEVEL 1**

CURRENT SITUATION:

Initial attack activity was light nationally with 820 new fires reported for the week. Three new large fires were contained in the Southern Area.

SOUTHERN AREA INCIDENTS:

INCIDENT NAME	ST	UNIT	SIZE	% CTN	EST CTN	TOTL PERS	CRW	ENG	HELI	STRC LOST	\$\$\$ CTD
BORREGO	TX	RGR	950	100	---	29	0	8	0	0	NR
CRAIG	FL	FNF	400	100	---	22	1			0	24.5K
DEER SHACK	OK	OKS	130	100	---	3	0	1	0	0	NR

RGR = Lower Rio Grande Valley National Wildlife Refuge
OKS = Oklahoma Division of Forestry

FNF = National Forests in Florida

OUTLOOK:

Weather Discussion: Over the weekend, low pressure is expected to develop in the Gulf of Mexico. This low will induce showers and thunderstorms over Florida through the weekend and into early next week. Some of this moisture will be drawn into the Mid-Atlantic and Tennessee Valleys by Monday as a cold front dives into the Ohio Valley. In the West, another low pressure system will move onto the northern California coast this weekend, bringing some much needed light showers and mountain snows to portions of the Northwest and Northern Rockies west of the Continental Divide early next week.

Geographic Area Weather	High Temperatures	Minimum Relative Humidity	Wind
Southern California Areas of morning low clouds and fog along coastal areas and valleys. Otherwise partly cloudy with isolated rain and snow showers. Snow level will be around 6,000 feet.	40 to 55 mountains. 60 to 70 valleys. 50 to 60 upper deserts. 60 to 70 lower deserts.	50 to 70%.	Southeast to southwest 5 to 15 mph.

WILDLAND/URBAN INTERFACE—STRUCTURE PROTECTION

The primary consideration of any operation is to assure firefighter and public safety. It is a must to assess potential fire behavior, ingress/egress routes, nature of the threat, hazardous materials, and available water supplies before engaging in the protection of any structure.

● Factors that may make an attempt to save a structure hopeless or too dangerous include:

- The fire is making a sustained run and there is little or no clearance between the structure and the fuel.
- The fire behavior is extreme; spot fires are numerous and the spread is outpacing containment.
- Water supply will not last as long as the threat of the fire.
- The fire's intensity dictates that you leave the fire area immediately.
- The structure is constructed of wood and has a wood, shake roof.
- The roof of the structure is more than one-quarter involved.
- There is fire inside of the structure or windows are broken and there is no way to quickly repair them.
- You can't safely remain at the structure because your escape route could become unusable.

● When implementing a plan to protect structures, consider the following:

- Don't enter a burning structure unless you are trained, equipped, and authorized. Firefighter safety and survival is the number one priority.
- Always stay mobile and wear all of your PPE.
- Back in equipment to allow for a quick escape.
- Coil a short, 1 ½", charged line with fog nozzle on your engine for safety and quick knock down capability.
- Don't make long hose lays. Keep at least 100 gallons of water reserve in your tank.
- Check the road system before the fire approaches. Know bridge limits, alternate access routes, and turnarounds for your vehicle and other support vehicles.
- Determine if residents are home. Leave on the inside and outside lights, regardless of the time of day. Close the garage door.
- Place the owner's ladder at a corner of the home on the side with the least fire threat.
- Coil and charge garden hoses.
- Check and mark hazmat; e.g., LPG, pesticides, and paint storage.
