## Predictive Services Discussion

Dry thunderstorms are possible in eastern Oregon, the northern Great Basin, western Montana and western Wyoming through Thursday. Thunderstorms over the southern Great Basin will become increasingly wet. Hot, dry weather over most of the West will give way to cooler weather and gusty winds for Friday and the weekend, especially over Montana, Idaho and the Pacific Northwest.

## Lookouts

Lookouts are often better situated to notice the cumulative changes of fire behavior.

- Fire Order \#8 says, "Establish lookouts in potentially hazardous situations." Should you utilize lookouts at all times?
- Lookouts should be posted at all times.
- What are you looking for when you are selecting a lookout location?
- Choose a good vantage point, preferably with a good overview of the entire area where firefighters are located, including escape routes and safety zones.
- Utilize aircraft if they are available, but only as a complement to established lookouts on the ground. Never rely exclusively on aircraft as your lookout.

What are the desired qualities, capabilities, knowledge, and responsibilities of a lookout person?

- Experienced firefighter.
- Solid knowledge of fire behavior and ability to recognized and monitor other environmental hazards.
- Good communicator--keeps the crew advised of fire behavior changes, tracks weather trends and relays the information, informs crew of work progress and updates from the latest strategy and tactical briefings.
- Monitors and accounts for all individuals within his/her assigned area at all times, and will notify others if breaks are needed.

What is the necessary equipment for a lookout?

- PPE, radio with extra batteries, compass, binoculars, belt weather kit, IAP, map, food, and water.
