Predictive Services Discussion

Cold, wet weather is expected to continue for most of the Northwest, Idaho, Montana and Wyoming today. The upper level low will move over the Intermountain West today and east of the region by Sunday. Windy weather will continue across Nevada today. Drier weather is on tap for most of the West Sunday as a high pressure ridge builds in. Gusty, offshore winds are forecast for California Sunday and Monday. Another weather system with more rain and snow is due into the Northwest and Northern Rockies Monday through Wednesday. Northern Minnesota will have showers through the weekend.

http://www.nifc.gov/sixminutes/dsp_sixminutes.php

SPOT WEATHER FORECAST

Spot weather forecasts should be requested for those fires that have potential for extreme fire behavior, exceed initial attack, or are located in areas where Red Flag Warnings have been issued.

● Basic elements needed for a spot weather forecast include:

- Name of fire and management agency
- Request time and date
- Location by ¼ section
- Drainage name
- Exposure
- Size
- Elevation (top and bottom)
- Fuel type
- Fire character (ground, crown, etc.)
- Weather conditions (place, elevation, observation time, wind direction, wind velocity, dry bulb, wet bulb, remarks)
