

**National Interagency Coordination Center
Incident Management Situation Report
Thursday, April 19 2007 - 1000 MDT
National Preparedness Level 1**

National Fire Activity

Initial attack activity: 111 (Light)
 New large fires: 4 (*)
 Large fires contained: 4
 Uncontained large fires: 4
 Area Command Teams:
 Type 1 IMTs committed:
 Type 2 IMTs committed: 1
 Fire Use Teams:

** Uncontained large fires do not include WFU or confine/contain incidents. **

Southern Area (PL 3)

New fires: 55
 New large fires: 2
 Uncontained large fires: 3
 Type 2 IMTs committed: 1

Sweat Farm Road, Georgia Forestry Commission. IMT 2 (Floyd). Started on private land 10 miles southeast of Waycross, GA. Southern rough and timber. Moderate fire behavior. Highways 84 and 122 closed.

Knee Knocker Swamp, Georgia Forestry Commission. Two miles northwest of Nahunta, GA. Southern rough. Moderate fire behavior.

Burns Lake, Big Cypress National Preserve. Eight mile east of Ochopee, FL. Southern rough. Short runs, torching and spotting.

Potato Hill, Ouachita NF. Fourteen miles west of Danville, AR. Previously reported WFU incident. Pine and hardwood litter. Minimal fire activity. Last narrative report unless significant activity occurs.

MNS - Minnesota Department of Natural Resources

Predictive Services Discussion: Low humidity and dry weather will continue over most of Florida and Georgia today. Northwest Minnesota will see low humidity and gusty winds in advance of an approaching storm system. Gusty winds and low humidity are also expected over portions of New Mexico and far western Texas today.

WILDLAND/URBAN INTERFACE WATCHOUTS

The primary consideration is to first assure firefighter and public safety. It is a must to assess potential fire behavior, ingress/egress routes, nature of the threat, hazardous materials, and available water supplies before engaging in the protection of any structures. The first step in conducting a safe operation is to assess whether the firefighting operations can be conducted safely.

● Consider the “Wildland/Urban Interface Watchouts” in completing a risk analysis for the urban interface area to be protected. Remember there are three categories of structures:

- Those that are not threatened.
- Those that are threatened.
- Those that have already been lost or too dangerous to protect.

● Wildland/Urban Interface Watchouts:

- Poor access and narrow, one-way roads. A rapidly spreading fire could trap apparatus and personnel before they can turn around or move away from the flames and smoke.
- Observe bridge limits. Exceeding bridge limits could lead to bridge failure with a resultant blocking of ingress/egress routes that could result in the loss of an escape route or loss of equipment.
- Inadequate water supply. Without a reserve supply of water, the fire can overtake an area before the fuels can be cleared away.
- Natural fuels are located 30 feet or closer to structures on level ground. Remember structures on slopes require greater clearance. Structures are located on canyon slopes or “chimneys” on slopes of 30% or more with continuous, flashy fuels. The resulting rate of spread of any fire in this terrain can quickly extend beyond control.
- Extreme fire behavior: Situations involving crowning, large flame heights and erratic fire behavior can extend in an unpredictable manner beyond the control of any number of personnel. Strong winds of 25+ MPH: Winds increase the chance of spotting over the heads of firefighters and trapping them between both fire areas. Winds also cause greater preheating of fuels in the path of a fire front.

● continued...

- The need to evacuate the public, livestock, pets, and/or animals. This critical activity can pull personnel from the firefighting activity and can distract attention from fire behavior at a time when the greatest alertness is needed.
- Propane and above ground fuel tanks that are next to wooden structures or close to vegetation
- Power lines and poles: What is their location in relation to the structures that are being protected? Watch for both overhead and downed power lines.
- Local citizens are attempting suppression activities. Lack of knowledge in fire suppression may lead to unsafe tactics.
- Airtanker retardant drops and helicopter bucket operations: Establish communications and keep fire personnel out of the drop zone.
