Predictive Services Discussion: Increasing thunderstorms in the West over the next few days. Initially dry thunderstorm activity is expected to expand from northern California across the Northwest today and Friday. Mixed wet and dry thunderstorms will also increase over Montana and Idaho. Wet thunderstorms will continue in the southern Great Basin and Four Corner states.

## Unfamiliar With Weather And Local Factors Influencing Fire Behavior

- Can you ask questions of local experts? What kinds of questions would you ask?
- Does the operational period plan give you adequate weather and information? What kinds of weather forecasts can you get? What other weather or local information do you look for in the shift plan?
- Can you get information from resources that have been on the fire? What questions will you ask of the crew that you are replacing?
- Is there any other way to obtain information? List common sources of information on weather and local factors.

To reduce risks:

- Base all actions on current and expected fire behavior.
- Post lookouts.
- Establish escape routes and safety zones.
- Take extra caution! Discuss a fire where you relied on information from the local unit (perhaps where your fire knowledge and experience was very different from how they did things-Southeast or Alaska).
