Predictive Services Discussion: Sundowner winds expected over Santa Barbara and Ventura counties of Southern California today and possibly Friday. Otherwise, gusty winds are on tap for portions of the Northwest, Northern California and the Great Basin the next couple of days. Isolated wet and dry thunderstorms are forecasted for the Southwest and Great Basin with more numerous and wetter storms over the Northwest, Idaho and Montana. Virginia to Georgia will be dry with low humidity today, but showers should move into the region late Friday and over the weekend.

Link to Predictive Services Outlook products.

Downhill Fireline Construction Checklist

Downhill fireline construction is hazardous in steep terrain, fast-burning fuels, or rapidly changing weather. Downhill fireline construction should not be attempted unless there is no tactical alternative. When building downhill fireline, the following is required:

- Crew supervisor(s) and fireline overhead will discuss assignments prior to committing crew(s). Responsible overhead individual (TFLD or ICT4 qualified or better) will stay with job until completed.
- Decision will be made after proposed fireline has been scouted by supervisor(s) of involved crew(s).
- LCES will be coordinated for all personnel involved.
 - Crew supervisor(s) is in direct contact with lookout who can see the fire.
 - Communication is established between all crews.
 - Ensure rapid access to safety zone(s) in case fire crosses below crew(s).
- Direct attack will be used whenever possible; if not possible, the fireline should be completed between anchor points before being fired out.
- Fireline will not lie in or adjacent to a chute or chimney.
- Starting point will be anchored for crew(s) building fireline down from the top.
- Bottom of the fire will be monitored; if the potential exists for the fire to spread, action will be taken to secure the fire edge.
