Predictive Services Discussion: Scattered to numerous thunderstorms will continue across the interior West today with moisture moving northward and pushing the thunderstorm threat into Washington, northern Idaho and northwest Montana. Driest storms will develop in the Northwest and Western Great Basin. Windy conditions are expected to develop in northeast California and western Nevada. Hot, dry and unstable conditions will continue in the Northwest. Relative humidity will improve across the Southeast as precipitation moves into the region. Warm and dry conditions will continue in Alaska with isolated dry thunderstorms possible in the eastern interior.

<u>Link</u> to Predictive Services Outlook products.

^{*} Zitziana, Tanana Zone, BLM. Fifty miles southeast of Tanana, AK. Black spruce and brush. Active fire behavior.

Today's discussion is from "This Day in Wildland Fire History"

"Lessons Learned" serve as brief summaries of powerful learning opportunities. You can use these summaries as a foundation and launch point for further dialogue and discussion. Apply these lessons learned to yourself, your crew, and your unit.

Part III - South Canyon Fire, Colorado, 1994 (A Four-Part Series)

Incident Summary

On July 2, 1994, seven miles west of Glenwood Springs, Colo., lightning ignites a fire in piñonpine and juniper on a ridge at the base of Storm King Mountain. The entire general area, in a oneyear drought, is experiencing low humidities and record-high temperatures. Over the next two days, the South Canyon Fire increases in size. Initial attack resources are assigned. Four days later, on July 6, a dry cold front moves into the fire area. As winds and fire activity increases, the fire makes several rapid runs. Fourteen firefighters perish as they try to outrun the flames.

July 5 - Summary of Activities

Red flag warnings and very high to extreme fire danger are predicted again today.

A crew of seven firefighters hikes up into the South Canyon Fire at the base of Storm King Mountain. They cut Helispot 1 and begin direct fireline construction downhill along the fire's edge below this helispot.

Storm King Minurian

Fedagod 1

July 3 Freetre
and Fedagod Drop

Once

the helispot downhill toward the west drainage.

The Jumper-in-Charge informs the IC that the fire has crossed their fireline and is burning actively. The jumpers begin

building fireline on the east side of the ridge. After sizing-up the current fire, the Jumper-in-Charge orders two Type 1 hand crews. By 10 p.m., the fire has grown 20 acres today. It now covers 50 acres.

The IC orders another district engine crew, one helicopter, and one 20-person hand crew. A load of eight smokejumpers is then substituted for the hand crew.

To support fireline construction, an air tanker retardant drop is requested. After the first load is dropped, due to steep terrain and gusty winds, the IC and pilot agree that more drops would be ineffective.

At 5:30 p.m. the IC and engine crew leave the fire to refurbish equipment. Fifteen minutes later, 8 smokejumpers are dropped at the top of the fire. The IC directs them to work on the fireline from

Lessons Learned Discussion Points

Downhill fireline construction is hazardous in steep terrain, fast-burning fuels, and rapidly changing weather. Downhill fireline construction should not be attempted unless there is no tactical alternative.

If your fire crew was assigned to construct fireline downhill on Storm King, what would your concerns be? Could you perform this operation safely? (Reference page 1 in your IRPG for this discussion.)
