National Interagency Coordination Center Incident Management Situation Report Sunday, October 25, 2009 – 0530 MDT National Preparedness Level 1

National Fire Activity

Initial attack activity: Light (8 new fires)

New large fires: 0 (*)
Large fires contained: 0
Uncontained large fires : ** 1
Area Command Teams committed: 0
NIMOs committed: 0
Type 1 IMTs committed: 0
Type 2 IMTs committed: 0

Nationally, there are 48 large fires being managed with minimal or no resource commitment that are not shown on today's report.

Link to Geographic Area daily reports.

Southwest Area (PL 2)

New fires:0New large fires:0Uncontained large fires:1

Bachelor, Apache-Sitgreaves NF. Nine miles southeast of Christopher Creek, AZ. Timber. No new information.

Incident Name	St	Unit	Size	Size Chge 24 Hrs	% Ctn	Est Ctn	Totl Pers	Pers Chge 24 Hrs	Crw	Eng	Heli	Strc Lost	\$\$ CTD	Origin Own
Bachelor	ΑZ	ASF	750		80	10/26	108		5	6	1	0	225K	FS

Predictive Services Discussion: The southwest quarter of the country will continue to see warm and dry conditions. North to northeast winds will continue through the morning hours across portions of northern California though the south coast of Santa Barbara County. Although these winds may be strong at times, increased fuel and soil moistures from recent rainfall will limit fire potential. Elsewhere, a storm system will move into the Northwest today bringing cooler temperatures and precipitation from the Cascades westward.

Link to Predictive Services Outlook products.

^{**} Uncontained large fires do not include confine/contain and resource benefit incidents.

Today's discussion is from the Miscellaneous Category.

Hazard Mitigation Through Risk Management

—Risk Management doesn't get in the way of doing the mission – it is the way we do the mission.|| The Risk Management Process assists in ensuring that critical factors and risks of the fireline work environment are considered during decision making. Good risk management utilizes a five-step process:

Step 1—Situational Awareness:

Obtain information.

Scout the fire.

Identify hazards—those likely to result in a negative impact.

Consider all aspects of current and future situations.

Consider known historical problem areas (Apply information from the Fire Danger Pocket Card.).

Recognize the need for action.

Demonstrate ongoing awareness of fire assignment status.

Note deviations.

Attempt to determine why discrepancies exist with information before proceeding.

Step 2—Hazard Assessment:

Assess hazards to determine risks (e.g., fire behavior, snags, unburned fuels, work/rest).

Use the Look Up, Down, and Around; and the Tactical Watch Outs (both located in the Incident Response Pocket Guide) to identify high-risk tactical hazards.

Assess the impact of each hazard in terms of potential loss, cost, and mission/operational degradation based on probability and severity (probability—how likely an event will occur; severity—consequences if the event occurs). Keep in mind that increased exposure time increases probability.

Step 3—Hazard Control:

Determine the best approach to mitigate or control the risk from the hazards assessed.

Establish controls (e.g., anchor point, LCES, utilize downhill checklist, limit exposure time).

As control measures are developed, reevaluate each risk until it is reduced to a level where benefits outweigh potential costs.

Step 4—Decision Point (decision to accept or not accept the risk(s) associated with an action):

Consider whether controls are in place for identified hazards, whether selected tactics are based on expected fire behavior and if instructions have been given and understood.

Make certain the decision is made at the appropriate level; if not, then elevate to a higher level.

Reject the action if the risk is unacceptable.

Step 5—Evaluation:

Ensure controls are implemented and accomplished to standards.

Supervise/evaluate effectiveness of controls and decisions. Stay on top of the situation and adjust risk controls as necessary.

Anticipate consequences of decisions; if controls do not work, determine problem and derive a better solution.

Adjust actions as the situation changes; maintain situational awareness at all times.

Maintain feedback line.
