**Predictive Services Discussion:** Strong winds of 20-30 mph and RH in the teens will produce critical fire weather conditions across parts of eastern New Mexico and West Texas. Showers and thunderstorms will develop across the Southeast and Gulf States from the Carolinas to east Texas. Scattered snow and coastal rain will continue across Washington, Oregon, northern California, and in to Colorado and Wyoming.

Link to Predictive Services Outlook products.

Today's discussion is from the Weather / Fire Behavior Category.

# SPOT WEATHER FORECAST

Spot weather forecasts should be requested or submitted online for those fires that have potential for extreme fire behavior, exceed initial attack, or are located in areas where Red Flag Warnings have been issued.

Basic elements needed for a spot weather forecast include:

- Name of fire and management agency
- Request time and date
- Location by ¼ section
- Drainage name
- Exposure
- Size
- Elevation (top and bottom)
- Fuel type
- Fire character (ground, crown, etc.)
- Weather conditions (place, elevation, observation time, wind direction, wind velocity, dry bulb, wet bulb, remarks and important U.S. indicators)

## Activity: Calibrate your Kestrel and review belt weather kit use.
