BNX – Bent County

**Predictive Services Discussion:** Critical fire weather conditions associated with strong winds of 30 to 45 mph and low relative humidity below 15 percent will spread over much of the southwest including southern Nevada and Utah, northern and western New Mexico and parts of southeastern Colorado, southwestern Kansas, western Oklahoma and the Texas Panhandle. Widely scattered dry thunderstorms will develop across much of New Mexico and southern Colorado. A strong upper low will move into the Great Basin, bringing very windy conditions to much of the interior west. Rain will continue across northern California and Oregon and will move into Idaho and western Montana. Widely scattered showers and thunderstorms will develop around the Great Lakes and Ohio Valley and along the Gulf coast. In Alaska, temperatures will warm across the state. Widely scattered showers and a few thunderstorms will develop in the interior

**Today's discussion is from the  
Aviation Category.**

## **AVIATION COMMUNICATIONS**

Discuss the following information in terms of effective communication with aircraft. Involve the pilot in this discussion.

- Establish an air-to-ground frequency on the fire, and make sure everyone knows what it is.  
Avoid switching frequencies in the middle of an operational period.
- Consider using national air-to-ground frequencies.
- Discuss Guard frequencies:
  - How they work.
  - When to use them.
  - What frequencies are established for aircraft in your area?
  
- Aviation communications should be clear, concise, short, and to the point.
- Use standard terminology that can be understood by all people you are talking to. Do not use local slang.
- Know what you want to say before you key the microphone. Don't think and talk at same time.
- Before you key your microphone to talk, be sure to listen to ensure you don't cut into another transmission.
  
- Identify who you want to talk to by the call sign and identify yourself in every transmission.
- If the frequency gets congested, request another frequency. Upon receipt, ensure that all people who need to be on the new frequency transfer to that frequency.
- When giving ground descriptions, describe the location as if you are viewing the location from the direction an aircraft would be traveling. Use a common frame of reference for the sender and receiver.
- Use easily understandable directions, such as north, south, east, west, 2 o'clock, 9 o'clock, left 20 degrees, right 45 degrees, etc.
- When giving directions, always give them in relation to the pilot's perspective.
