Predictive Services Discussion: Breezy and very dry conditions will continue with minimum humidity in the single digits over the Southwest, southern Utah, and southern Colorado. Hot conditions will continue across most of the South and Mid-Atlantic States with widely scattered thunderstorms. Scattered showers and thunderstorms will occur over the northern half of the country and over the southern Plains. In Alaska, temperatures will remain cool with scattered showers.

## Today's discussion is from the Entrapment Category.

Scenario

## ENTRAPMENT AVOIDANCE

Avoiding situations where firefighters become entrapped is the first concern when devising strategy and tactics. The following discussion points are among the things that should be considered.
Discuss the three types of safety zones and describe examples.

- The burn
- Natural features
- Constructed sites
- Discuss the guidelines for distance separation to avoid radiant heat injury.
- Four times the maximum flame height ( 20 feet-flame height $\times 4=80$ feet radius from firefighters)
- Discuss size based on amount of resources and equipment in the area.
- Discuss heat impact factors that will affect the guidelines for distance separation.
- Convection heat from wind and terrain features
- Location relative to fire spread
- Reburn potential of fuel in safety zone
- Discuss that firefighter's have a right to know the location of their escape routes and safety zones at all times.
- Discuss that firefighter have a right to ask for clarification when faced with unclear instructions or fear of the unknown.
- Describe a basic procedure for identification of effective escape routes and safety zones.
- Observe
- Visualize
- Identify
- Time
- Inform
- Evaluate
