Incident Management Situation Report  
Tuesday, June 21, 2011 – 0530 MT  
National Preparedness Level 3**

**National Fire Activity**

Initial attack activity:	Moderate (210 new fires)
New large fires:	17 (*)
Large fires contained:	6
Uncontained large fires: **	52
Area Command Teams committed:	1
NIMOs committed:	1
Type 1 IMTs committed:	5
Type 2 IMTs committed:	13

Nationally, there are 15 large fires being managed to achieve multiple objectives.

\*\* Uncontained large fires include only fires being managed under a full suppression strategy.

**Predictive Services Discussion:** Hot, dry weather with no significant winds expected across the Southwest today. Increasing moisture across Southern Area will bring some thunderstorms to the western portion while the eastern portion remains drier. Florida will have a few afternoon thunderstorms along the sea breeze front. Showers are expected in Alaska.

**Today's discussion is from the  
First Aid / Health Category.**

**HYDRATION**

Dehydration is the result of the body trying to regulate its temperature naturally through sweating. Studies conducted on wildland firefighters indicate that during fire suppression activities firefighters need to drink a minimum of 1 quart of fluid each hour of work.

- Maintaining body fluids is essential for sweating. You must hydrate before, during, and after work.
- Before work you should take extra fluids to prepare for the heat. Drink 1 or 2 cups of water, juice, or a sport drink before work.
- While working drink at least 1 quart of fluid per hour. Drink as much as you can during the lunch break. Water is your greatest need during work in the heat.
- Hyponatremia (abnormally low concentration of sodium in the blood) as a result of excessive water intake a potentially life-threatening complication. Hyponatremia can be prevented when rehydration is enhanced by fluids containing sodium and potassium, or when foods with these electrolytes are consumed along with the fluid.
- After work it is important to continue drinking to replace fluid losses. Thirst always underestimates fluid needs, so you should drink more than you think you need.
- Unacclimatized workers lose more salt in the heat so they need to pay particular attention to salt replacement. Don't overdo salt intake; too much salt impairs temperature regulation. Excessive salt can cause stomach distress, fatigue, and other problems.
- You can assess your hydration by observing the volume, color, and concentration of your urine. Low volumes of dark, concentrated urine, or painful urination indicate a serious need for rehydration. Other signs of dehydration include a rapid heart rate, weakness, excessive fatigue, and dizziness.
- Rapid loss of several pounds of body weight is a certain sign of dehydration. Rehydrate before returning to work; continuing to work in a dehydrated state can lead to serious consequences, including heat stroke, muscle breakdown, and kidney failure.
