Predictive Services Discussion: Scattered wet and dry thunderstorms will develop over Colorado, Utah, Nevada, Arizona and southern California. A cold front moving into Washington and Oregon will bring showers and thunderstorms across the Northwest and Northern Rockies. A trough over the eastern U.S. will continue to produce scattered thunderstorms over the Gulf and mid-Atlantic states.

Predictive Services Outlook products: http://www.predictiveservices.nifc.gov/outlooks/outlooks.htm

Today's discussion is from the LCES (Lookouts, Communication, Escape Routes, and Safety Zones) Category.

## Scenario

## ESCAPE ROUTES

An escape route is a preplanned and understood route to reach a safety zone.

- What are the primary concerns in choosing an escape route?
- Select the closest, least obstructed route.
- Plan for more than one escape route.
- Avoid an uphill escape.
- Scout and clearly mark the route for visibility (aids during smoky situations or night operational periods). NWCG recommends using hot-pink flagging marked "Escape Route" (NFES 0566). Crews with colorblind members may wish to carry and utilize fluorescent chartreuse flagging (NFES \# 2396).
- Determine escape time--consider slowest person, fatigue, and temperature factors.
- Continuously reassess the situation with regard to work progress and additional resource arrivals.
- Assure all line personnel are familiar with escape routes.
- Vehicles parked for escape.
