National Interagency Coordination Center Incident Management Situation Report Sunday, July 10, 2011 – 0530 MT National Preparedness Level 3

National Fire Activity

Initial attack activity:	Moderate (237 new fires)
New large fires:	9 (*)
Large fires contained:	5
Uncontained large fires: **	22
Area Command Teams committed:	1
NIMOs committed:	0
Type 1 IMTs committed:	4
Type 2 IMTs committed:	4

Nationally, there are 21 large fires being managed to achieve multiple objectives. ** Uncontained large fires include only fires being managed under a full suppression strategy.

Link to Geographic Area daily reports.

Two MAFFS C-130 aircraft and support personnel from the 302nd Airlift Wing, Air Force Reserve, Colorado Springs, CO, are deployed to Albuquerque, NM. Col. Jay Pittman is the Air Expeditionary Group Commander.

Southwest (PL 4)

New fires:	27
New large fires:	0
Uncontained large fires:	4
Area Command Teams committed:	1
Type 1 IMTs committed:	4

Las Conchas, Bernalillo District, New Mexico DOF. Area Command Team (Oltrogge). IMT 1 (Hughes, Morcom and Turman). IMT 1 Reinarz released today. Thirteen miles west of Los Alamos, NM. Timber and grass. Active fire behavior. Numerous residences threatened.

Pacheco, Santa Fe NF. Nine miles north of Santa Fe, NM. Timber and slash. No new information.

Stanley, San Carlos Agency, BIA. Twenty miles east of Globe, AZ. Juniper and grass. No new information. Last report unless new information is received.

Triplets, San Carlos Agency, BIA. Three miles north of San Carlos, NM. Grass. No new information. Last report unless new information is received.

New fires:	12
New large fires:	5
Uncontained large fires:	14
Type 2 IMTs committed:	4

Texas IMT 2 (Hannemann) is managing existing and new fires located in Texas state initial attack zones.

Simmons Road, North Carolina DFR. North Carolina IMT2 (Hendricks). IMT is also managing the Juniper Road fire. Nine miles northeast of Tar Heel, NC. Brush. Minimal fire activity. Residences threatened.

Juniper Road, North Carolina DFR. Thirteen miles northeast of Rocky Point, NC. Brush. Minimal fire activity. Numerous residences threatened.

Honey Prairie, Okefenokee NWR. Florida IMT 2 (West). Five miles northeast of Fargo, GA. Southern rough. Active fire behavior. Numerous residences threatened.

Sweat Farm Again, Georgia DOF. Northeast Compact IMT 2 (Schenk). IMT is also managing the Racepond fire. Twelve miles west of Waycross, GA. Southern rough. Minimal fire activity. Residences threatened.

Racepond, Georgia DOF. Twelve miles south of Hoboken, GA. Hardwood litter. Minimal fire activity. Structures threatened.

* Browning, Texas Forest Service. Six miles northeast of Fluvanna, TX. Brush. Active fire behavior.

CR 337, Texas Forest Service. Five miles northwest of Mineral Wells, TX. Brush. Minimal fire activity.

Espanola, Florida DOF. Seven miles northwest of Bunnell, FL. Southern rough. No new information. Last report unless now information is received.

* **Goodwin,** Texas Forest Service. Eight miles northeast of Childress, TX. Grass. Active fire behavior. Residences threatened.

Malone, Texas Forest Service. Ten miles north of Robert Lee, TX. Grass. No further information received. Reduction in acreage due to more accurate mapping.

1008, Texas Forest Service. Six miles northwest of Glen Rose, TX. Slash and brush. Residences threatened. No further information received. Reduction in acreage due to more accurate mapping.

* All Hands, Texas Forest Service. Six miles southeast of Spearman, TX. Grass. No further information.

* **North Woods**, Texas Forest Service. Twelve miles southwest of Idabel, TX. Timber. No further information. received.

Terrell Mill Pond, Georgia DOF. Two miles west of Hinesville, GA. Southern rough. No further information.

Predictive Services Discussion: Scattered wet and dry thunderstorms will affect Arizona, western and northern New Mexico, eastern Great Basin and the Central Rockies on Sunday. Showers and storms will persist over the far southeastern U.S., with hot and dry weather continuing across eastern New Mexico and the Plains. Cooler and somewhat wetter conditions are expected to develop across the Northwest southward into northern California and the western Great Basin early in the upcoming week.

Predictive Services Outlook products: <u>http://www.predictiveservices.nifc.gov/outlooks/outlooks.htm</u>

Today's discussion is from "This Dav in History"

"This Day in History" is a brief summary of a powerful learning opportunity. You can use this summary as a foundation and launch point for further dialogue and discussion. Apply these lessons learned to yourself, your crew, your team and your unit.

Thirtymile Fire – July 10th, 2001 - Washington Incident Summary: The Chewuch River runs down a deep "V" canyon with 70% to 100% slopes and little elevation change along the canyon floor. The SW to NE orientation of the canyon aligns with afternoon ridge and upcanyon winds. Dead fuel moistures are 10 hour at 3%, 100 hour at 5%, and 1000 hour at 10% (historic lows) and live fuels generally less than 100%. Ladder fuels are abundant on the canyon floor and riparian fuels are dry enough to support surface fire and torching throughout the night of July 9th and into the morning of July 10th. Crown fuels are dense and drought stressed. The temperature reaches 94° F with an RH of 8% along the canyon floor.

Local firefighters considered it unusual for green foliage to be burning like it was for this time of year. If you are not familiar with local conditions of a fire you are being dispatched to, what are some quick and effective tools you can use to gain an understanding of that area?

9:26pm July 9th a fire is reported near the road along the Chewuch River. The fire is about five acres with two spots ahead of it. An engine with 3 firefighters arrives just after 11 pm. One engine arrives just before midnight. An IHC arrives at 1:00 am after working another fire all day and having had only 30 minutes of sleep. The engine departs the fire around 1:30 am. A local Type 2 crew is called up just after midnight. A majority of the crew has had only one or two hours of sleep. By 5:30 am July 10th there are seven spots covering about five to six acres. Two spots are about an acre each.

Identify and discuss the red flags that "pop-up" during this 8 hour period. If this was your crew, what would you be doing to identify and mitigate them?

At 7:00 am the Type 2 crew gets a briefing at a ranger station prior to heading to the fire and is informed that they will be doing mop-up. They arrive at the fire at 9:00 am. The IHC leaves the fire for rest at 11:00 am. Mid-morning fire intensity increases with more frequent torching and increasingly longer spotting distances. By about noon the crew is experiencing difficulties with the pumps and multiple broken handtools. Just after noon the IC requests additional resources including a helicopter. The IHC returns to the fire around 2:00 pm with less than 3 hours of rest.

Though water was readily available, relatively little was applied to the fire during the night and morning. This was largely due to operational problems with pumps and hoses, as well as delays in availability of a helicopter. In this situation, how would you and your crew adapt your tactics and develop your trigger points?

The fire has been burning through hoses and spotting over the line. The IC pulls the crew back to the road and accepts the fact that the fire was lost. At 3:00 pm the Type 2 crew is joined by the IHC at the "safety zone" on the west side of the river. The helicopter makes water drops on small spots on the south edge of the fire until having to refuel. The fire had spread up the east canyon walls and soon after had moved back to the canyon floor with spotting on the west wall of the canyon. At 3:20 pm, the fire is 50 acres, crowning and going to the ridge. At 3:35 pm the fire is 100 acres.

Two engines are ordered and arrive around 3:30 pm neither checking in with the IC nor receiving a tactical briefing. One engine crew radios for help with a spot. One, then eventually all of the squads of the Type II crew are sent to assist the engines with spots along the road. Minutes later the fire is actively spotting and is burning right up to the east side of the road. Some firefighters quickly drive back down the road to their "safety zone" shielding their faces from the intense heat as they pass the fire. 4:03 pm the Thirtymile Fire is forming its own thunderhead. A call is made to the other firefighters to get everyone out of the area. 4:34 pm, as the firefighters attempt to retreat they see a "wall of flames", and quickly turn around and drive up the canyon. 5:00 pm the fire is over 500 acres.

Records indicate that firefighters on the Thirtymile Fire had very little sleep prior to their assignments, and mental fatigue affected situational awareness and decision-making. How can you recognize fatigue in yourself and in your crew/team? Discuss what you WILL do about it?

The fire makes a strong upcanyon run. 5:24 pm, roaring, ash and a "fire snowstorm" abruptly overwhelm the area and surprises the crew. Cut off from their only escape route, back down the road, 8 firefighters and 2 civilians deploy on the road and 6 firefighters on the talus slope. 4 firefighters do not survive.

4 of the 6 firefighters that deployed on the talus slope did not survive. Using pages 28-29 in your IRPG, discuss the features of an optimal and survivable deployment site. Practice looking for them on PT hikes, patrolling the fireline, and while prepping prescribed burn units.
