

**National Interagency Coordination Center
Incident Management Situation Report
Wednesday, August 17, 2011 – 0530 MT
National Preparedness Level 2**

National Fire Activity

Initial attack activity: Light (150 new fires)
 New large fires: 7 (*)
 Large fires contained: 9
 Uncontained large fires: ** 14
 Area Command Teams committed: 0
 NIMOs committed: 0
 Type 1 IMTs committed: 1
 Type 2 IMTs committed: 1

Nationally, there are 44 large fires being managed to achieve multiple objectives.

** Uncontained large fires include only fires being managed under a full suppression strategy.

Southern Area (PL 3)

New fires: 49
 New large fires: 3
 Uncontained large fires: 6
 Type 1 IMTs committed: 1

Lateral West, Great Dismal Swamp NWR. IMT 1 (Quesinberry). Nine miles southeast of Suffolk, VA. Brush and grass. Minimal fire activity.

M&M Ranch, Texas Forest Service. Twenty-three miles south of Sweetwater, TX. Brush and grass. Active fire behavior.

* **Allison 412**, Texas Forest Service. Fifteen miles east of Sonora, TX. Grass. Moderate fire activity.

* **County Road 235**, Texas Forest Service. Thirteen miles east of Tyler, TX. Timber. Active fire behavior. Structures threatened. Evacuations in effect.

Wallow, George Washington & Jefferson NF. Four miles southeast of Strasburg, VA. Hardwood litter. No new information. Last report unless new information is received.

Bluff, Cherokee NF. Four miles southeast of Benton, TN. Timber. Minimal fire activity.

Predictive Services Discussion: The area of high pressure over the Southwest will strengthen and maintain hot and dry conditions which will extend towards the Northwest. Scattered showers and thunderstorms will extend from the Southwest to Colorado and then extend along a surface trough from the upper Mississippi Valley to the central Gulf Coast. Windy conditions are expected over the northern Rockies.

Predictive Services Outlook products: <http://www.predictiveservices.nifc.gov/outlooks/outlooks.htm>

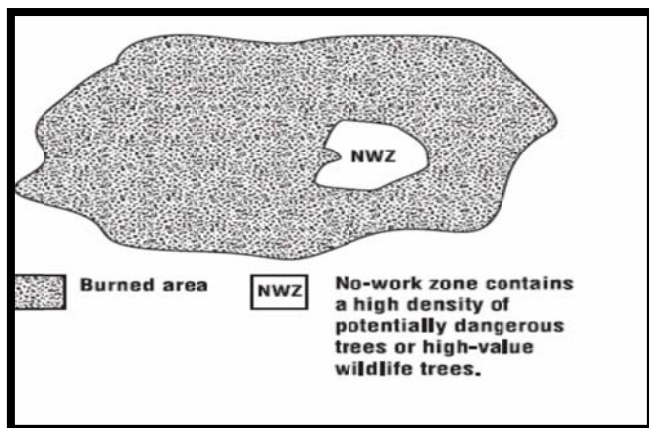

Today's discussion is from the Hazard Tree Category.

HAZARD TREE – NO WORK ZONES (NWZ)

Knowing when the exact time a given hazard tree (or compromised section) will fail is an extremely difficult, and is, in many cases, an unpredictable task. Given this fact, we need to manage firefighters' exposure to these hazards by creating a safe work area or NWZ. The size and extent of the NWZ must be determined by onsite conditions, such as terrain, lean, active fire in the tree and adjoining trees.

When an identified hazardous tree cannot be felled, then perform an assessment of which areas have too high a risk, and post a lookout to warn the personnel to stay clear of these areas while working in adjacent areas. If hazard still exists before leaving the area, flag the NWZ so that personnel entering the area will be able to recognize the hazard. Use the following failure zone illustrations as examples to help manage firefighter exposure to these identified hazards. Also remember to include the possibility of the "Domino Effect" to surrounding trees.

#1 - 1 1/2 X Height of snag, #2 - 1 1/2 X truck-to-branch-tip distance #3 - 1-1/2 X length of dead top.
