

**National Interagency Coordination Center
Incident Management Situation Report
Wednesday, September 14, 2011 – 0530 MT
National Preparedness Level 4**

National Fire Activity

Initial attack activity:	Moderate (272 new fires)
New large fires:	10 (*)
Large fires contained:	7
Uncontained large fires: **	28
Area Command Teams committed:	0
NIMOs committed:	3
Type 1 IMTs committed:	8
Type 2 IMTs committed:	15

Nationally, there are 84 large fires being managed to achieve multiple objectives.

** Uncontained large fires include only fires being managed under a full suppression strategy.

[Link](#) to Geographic Area daily reports.

Type 2 Incident Management Team (Pechota) assigned to Tropical Storm Lee recovery at Hancock Air National Guard Base in Syracuse, New York will be released today.

Two MAFFS C-130 aircraft and support personnel from the 153rd Airlift Wing, Cheyenne (Wyoming Air National Guard) have been activated and will operate from Boise, Idaho. Two MAFFS C-130 aircraft from the 302nd Airlift Wing, Colorado Springs (US Air Force Reserve), and two MAFFS from the 145th Airlift Wing, Charlotte (North Carolina Air National Guard) and support personnel have been activated and will operate from Austin, Texas.

Southern Area (PL 4)

New fires:	99
New large fires:	7
Uncontained large fires:	19
NIMOs committed:	1
Type 1 IMTs committed:	3

A NIMO (Kleinman) and a Type 1 Incident Management Team (Opliger) are assigned to provide support to existing and new fires in Texas.

Bastrop County Complex (two fires), Texas Forest Service. IMT 1 (Wilder). Six miles northeast of Bastrop, TX. Southern rough. Active fire behavior. Numerous residences threatened. Evacuations in effect.

Northeast Texas Fire Complex, Texas Forest Service. IMT 1 (Morcom). Four miles southwest of Linden, TX. Moderate fire activity. Residences threatened.

Riley Road, Texas Forest Service. Eleven miles southwest of Montgomery, TX. Timber. Creeping and smoldering.

101 Ranch, Texas Forest Service. Eight miles west of Palo Pinto, TX. Timber. Creeping and smoldering. Reduction in acreage due to more accurate mapping.

Gruber, Oklahoma DOF. Three miles northwest of Braggs, OK. Hardwood litter. No further information received.

841 Arbor, Texas Forest Service. Five miles east of Crockett, TX. Grass. Minimal fire activity.

* **Hat on Road**, Texas Forest Service. Three miles southeast of Bellevue, TX. Grass. Active fire behavior. Residences threatened.

Diana, Texas Forest Service. Four miles west of Diana, TX. Timber. Minimal fire activity.

Boot Walker, Texas Forest Service. Six miles east of Jefferson, TX. Timber. Minimal fire activity.

Marshall. Texas Forest Service. Seven miles west of Waskom, TX. Timber. Moderate fire activity. Residences threatened.

Three Horses, Okmulgee Field Office, BIA. Five miles north of Weleetka, OK. Hardwood Litter. No further information received.

Dam, Texas Forest Service. Five miles southwest of Whitney, TX. Grass. Minimal fire activity.

* **Union Grove**, Texas Forest Service. Five miles northeast of Salado, TX. Grass. Active fire behavior.

* **No Win**, Oklahoma DOF. Two miles northeast of Ludlow, OK. Timber. No further information received.

* **Ludlow 2**, Oklahoma DOF. One mile northeast of Ludlow, OK. Timber. No further information received.

* **899**, Texas Forest Service. Eleven miles east of Trinity, TX. Timber. Moderate fire activity. Residences threatened.

* **592**, Texas Forest Service. Three miles northeast of Gray, TX. Timber. Active fire behavior.

* **Crow Hollow**, Oklahoma DOF. Ten miles northwest of Stilwell, OK. Logging slash. No further information received.

Predictive Services Discussion: Scattered showers and thunderstorms will develop across the eastern Great Basin, the Southwest and the central and southern Rockies. Isolated thunderstorms will also form along the Sierras. Surface high pressure will bring much cooler conditions to the northern and central Plains, the Great Lakes and the Northeast. Warm weather will persist across the south with scattered showers and thunderstorms forming along a stationary front from Oklahoma to the Virginia coast.

Predictive Services Outlook products: <http://www.predictiveservices.nifc.gov/outlooks/outlooks.htm>

**Today's discussion is from the
Wildland / Urban Interface Category.**

Liquefied Propane Gas (LPG) Tank Hazards

Liquefied Propane Gas (LPG) tanks are commonly found in the wildland-urban interface and present hazards to firefighters in that environment. LPG tanks may be found in a number of other environments such as motor homes, travel trailers, grills, camp stoves, lanterns, etc. Directly attacking LPG tank fires is a structural fire task involving hazardous materials and should only be attempted by trained personnel using full structural personal protective equipment and equipped with a volume of water adequate to safely attack the fire.

● Boiling Liquid Expanding Vapor Explosions (BLEVE)

- The most recognized hazard with LPG tanks is BLEVE (Boiling Liquid Expanding Vapor Explosions) or sudden complete failure of the tank. Some training courses have directed responders to approach the tank from the sides, believing that the force of the explosion will occur on the ends of the tank. However, this is not a guarantee that you will be safe from projectiles or missiles from the explosion, as they may travel in ALL directions up to 2,500 feet away. Leave the area immediately if you smell propane, hear a rising sound from venting safety devices or see discoloration or deformation of the tank. If you leave the area, get at least 2,500 feet away and do not go down wind or down slope of the leaking propane. BLEVEs are a major hazard to emergency responders!

● Fuel Reduction Around Tanks

- Wildland firefighters may take action to prevent direct flame impingement on LPG tanks by removing wildland fuels in the area. However, be aware that lines from the tank to structures may be above or below ground, and may be cut by tools or equipment. Propane gas is heavier than air, and may move along the ground at some distance, and may ignited when it reaches open flame or another ignition source. Use extreme caution when doing fuel reduction around tanks, and flag any lines you encounter.

● Other Wildland Fire Considerations

- Do not position engines or other apparatus near LPG tanks or downwind / down slope from tanks.
- Do not deploy fire shelters near LPG tanks or downwind / down slope from tanks.

● Cooling Tanks

- In light fuels such as grasses, where any heat exposure to the tank will be very limited, rapid application of cooling water on the outside of the tank above the liquid level can reduce the likelihood of container failure by lowering the external temperature of the shell of the exposed tank. Water should not be directed at the valve safety devices, due to the potential of "icing" the valve closed.
- In heavy fuels where long duration heat exposure to the LPG tank is likely, evacuate all personnel and equipment 2,500 feet away and not down slope or down wind. NFPA says that direct flame impingement protection requires water flow of at least 500 gpm from an unmanned monitor nozzle. This is a situation for properly trained, equipped and supported structural firefighters.
