**Predictive Services Discussion:** A cold front moving into the Pacific Northwest will bring rain to the western halves of Washington and Oregon. Warm weather conditions will continue over much of the West with isolated to widely scattered thunderstorms developing over higher terrain of the Great Basin and the Southwest. High pressure will keep sunny and mild conditions over most of the eastern two-thirds of the nation except the Northeast where rain will fall from Virginia to Maine.

Predictive Services Outlook products: <http://www.predictiveservices.nifc.gov/outlooks/outlooks.htm>

**Today's discussion is from the  
Weather / Fire Behavior Category.**

### **SPOT WEATHER FORECAST**

Spot weather forecasts should be requested or submitted online for those fires that have potential for extreme fire behavior, exceed initial attack, or are located in areas where Red Flag Warnings have been issued.

● Basic elements needed for a spot weather forecast include:

- Name of fire and management agency
- Request time and date
- Location by ¼ section
- Drainage name
- Exposure
- Size
- Elevation (top and bottom)
- Fuel type
- Fire character (ground, crown, etc.)
- Weather conditions (place, elevation, observation time, wind direction, wind velocity, dry bulb, wet bulb, remarks and important U.S. indicators)

**Activity: Calibrate your Kestrel and review belt weather kit use.**
