

**National Interagency Coordination Center
Incident Management Situation Report
Friday, October 28, 2011 – 0530 MT
National Preparedness Level 1**

National Fire Activity

Initial attack activity: Light (68 new fires)
 New large fires: 0 (*)
 Large fires contained: 1
 Uncontained large fires: ** 0
 Area Command Teams committed: 0
 NIMOs committed: 0
 Type 1 IMTs committed: 0
 Type 2 IMTs committed: 0

Nationally, there are 13 large fires being managed to achieve multiple objectives.

** Uncontained large fires include only fires being managed under a full suppression strategy.

[Link](#) to Geographic Area daily reports.

This will be the last daily Incident Management Situation Report. This report will be posted Monday through Friday unless significant activity occurs.

Rocky Mountain Area (PL 1)

New fires: 0
 New large fires: 0
 Uncontained large fires: 0

SRA - Standing Rock Agency, BIA

Predictive Services Discussion: Strong surface high pressure will surge toward the Gulf in the wake of a cold front moving the southern US. Showers and a few thunderstorms, with a few snow showers in the mountains, will move across the Southeast behind the front. Pristine fall weather will spread across most of the rest of the nation with fair skies and cool days over most of the western, central and northeastern parts of the country. Another front entering the Pacific Northwest will produce rain over Oregon and Washington while clouds begin to spread across the northern Rockies. Low relative humidity will continue across the coastal ranges and foothills of southern California.

Predictive Services Outlook products: <http://www.predictiveservices.nifc.gov/outlooks/outlooks.htm>

**Today's discussion is from the
Weather / Fire Behavior Category.**

EXTREME FIRE BEHAVIOR 1

Mild, moderate and EXTREME fire behavior has always been present in cases of shelter deployment. It is critical for firefighters to maintain situational awareness of live and dead fuel moisture conditions as well as predicted and current weather conditions. As fire behavior changes, it is critical to act decisively to the changing situation.

- Discuss the following indicators of extreme fire behavior:
 - Relative humidity less than 15%
 - 1-hour fuel moisture less than 5%
 - Transition from surface to crown fire
 - Smoldering fires that exist in the early part of the day are beginning to burn very actively as the day progresses.
 - Approaching thunderheads with dark clouds beneath
 - Presence of dust devils indicating an unstable atmosphere
 - Increased spotting
 - Sudden calm
 - High clouds moving fast in direction different from surface wind
 - Predicted Haines Index of 5 and 6 in those areas where this level is a good indicator of atmospheric instability
 - Fire whirls
