Predictive Services Discussion: A weak cold front will move into the northern Great Basin and the northern Rockies while a warm front slowly moves north through the northern Plains, upper Mississippi, Ohio Valleys and New England. Widely scattered thunderstorms will develop along the Rockies from Wyoming to New Mexico and scattered showers and thunderstorms will form along the warm front from the Dakotas to Ohio. Scattered thunderstorms will move through south and west Texas. Extreme heat will continue in the Southeast. In Alaska, scattered showers and a few thunderstorms will remain over the South and the southeast Interior.

## Today's discussion is from the LCES (Lookouts, Communication, Escape Routes, and Safety Zones) Category.

## Safety Zones (part 2)

Safety Zone(s) are locations where the threatened firefighter may find refuge from the danger. Unfortunately shelter deployment sites have been incorrectly called safety zones. Safety zones should be conceptualized and planned as a location where no shelter is needed. This does not intend for the firefighter to hesitate to deploy their shelter if needed, just if a shelter is deployed the location is not a tree safety zone. Fireline intensity and safety zone topographic location determine safety zone effectiveness.

- How have you determined the distinction between a safety zone and a deployment zone?
- Is refuge in a vehicle, house an acceptable tactic?
- Consider access to the incident. You are often confronted with considerable distances of unburned fuel to cross. How do you mange LCES?
