Predictive Services Discussion: Scattered showers and thunderstorms will develop across much of the Southwest, eastern Great Basin and the northern Rockies. Some storms will produce heavy rain. Warming and drying will take place across the western Great Basin and California. Scattered showers and thunderstorms will also form across much of the eastern U.S. from Texas to New England. Dry and breezy conditions will continue across the Plains. In Alaska, rain and showers will spread across the south and the Interior.

Predictive Services Outlook products: http://www.predictiveservices.nifc.gov/outlooks/outlooks.htm

Today's discussion is from the Fireline Safety Category.

## DOWNHILL FIRELINE CONSTRUCTION CHECKLIST

Downhill fireline construction is hazardous in steep terrain, fast-burning fuels, or rapidly changing weather. Downhill fireline construction should not be attempted unless there is no tactical alternative. When building downhill fireline, the following is required:

- Crew supervisor(s) and fireline overhead will discuss assignments prior to committing crew(s). Responsible overhead individual (TFLD or ICT4 qualified or better) will stay with resources until the job is completed.
- Decision will be made after proposed fireline has been scouted by supervisor(s) of involved crew(s).
- LCES will be coordinated for all personnel involved.
- Crew supervisor(s) is in direct contact with lookout who can see the fire.
- Communication is established between all crews.
- Ensure rapid access to safety zone(s) in case fire crosses below crew(s).
- Direct attack will be used whenever possible; if not possible, the fireline should be completed between anchor points before being fired out.
- Fireline will not lie in or adjacent to a chute or chimney.

Starting point will be anchored for crew(s) building fireline down from the top.

- Bottom of the fire will be monitored; if the potential exists for the fire to spread, action will be taken to secure the fire edge.
- Can fire be carried with you?
