

**National Interagency Coordination Center
Incident Management Situation Report
Thursday, September 27, 2012 – 0530 MT
National Preparedness Level 3**

National Fire Activity

Initial attack activity:	Light (74 new fires)
New large fires:	0 (*)
Large fires contained:	0
Uncontained large fires: **	30
Area Command Teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	6
Type 2 IMTs committed:	7

** Uncontained large fires include only fires being managed under a full suppression strategy.

Northwest Area (PL 3)

New fires:	4
New large fires:	0
Uncontained large fires:	19
Type 1 IMTs committed:	2
Type 2 IMTs committed:	3

Table Mountain, Okanogan/Wenatchee NF. IMT 1 (Morcom). Eight miles northeast of Cle Elum, WA. Timber, logging slash, brush and grass. Backing fire. Numerous structures threatened. Evacuations and road closures in effect.

Wenatchee Complex (10 fires), Okanogan/Wenatchee NF. IMT 1 (Reinarz). Two miles west of Wenatchee, WA. Timber, brush and grass. Backing fire with single tree torching and spotting. Numerous residences threatened.

Goat, Okanogan/Wenatchee NF. IMT 2 (Leitch). Three miles southwest of Pateros, WA. Timber and grass. Creeping and smoldering with torching. Numerous structures threatened.

Cascade Creek, Gifford Pinchot NF. IMT 2 (Nickey). Eight miles north of Trout Lake, WA. Timber. Moderate fire activity.

Pole Creek, Deschutes NF. Transfer of command from IMT 2 (Watts) back to the local unit will occur 9/29. Six miles southwest of Sisters, OR. Timber. Minimal fire activity.

Okanogan Complex (3 fires), Okanogan/Wenatchee NF. Eight miles southeast of Carlton, WA. Timber. Backing, creeping and smoldering with isolated torching. Structures threatened.

Yakima Complex, Okanogan/Wenatchee NF. Seventeen miles northwest of Ellensburg, WA. Timber, brush and grass. No new information. Last report unless significant activity occurs.

Rooper, Prineville District, BLM. Started on private land three miles northwest of Antelope, OR. Brush and grass. No new information.

Northern Rockies Area (PL 4)

New fires: 6
New large fires: 0
Uncontained large fires: 8
Type 1 IMTs committed: 2
Type 2 IMTs committed: 3

McGuire Complex (2 fires), Nez Perce NF. IMT 1 (Joseph). One mile northwest of Dixie, ID. Timber. Active fire behavior with group tree torching and short-range spotting. Communities threatened. Evacuations in effect.

Sheep, Nez Perce NF. IMT 1 (Turman). One mile east of Lucille, ID. Timber, brush and grass. Group tree torching and short-range spotting. Structures threatened.

Condon Mountain, Flathead NF. IMT 2 (Pearson). Three miles northeast of Condon, MT. Timber. Backing fire with isolated group tree torching. Residences threatened.

Eagle Creek, Northern Cheyenne Agency, BIA. IMT 2 (Heintz). Thirteen miles southwest of Lame Deer, MT. Timber. Creeping and smoldering.

Sawtooth, Bitterroot NF. IMT 2 (Hall). Seven miles southwest of Hamilton, MT. Timber. Creeping and smoldering with single tree torching. Numerous structures threatened.

Millie, Gallatin NF. Twenty miles south of Bozeman, MT. Timber. Creeping and smoldering.

Powell SBW Complex, Clearwater NF. Previously reported incident. Forty-five miles southwest of Lolo, MT. Timber. Structures threatened. Area closures in effect. No further information received. Last report unless significant activity occurs.

Cottonwood Creek, Dakota Prairie National Grasslands. Started on private land thirty miles southwest of Watford City, ND. Juniper, brush and grass. Smoldering.

Cygnets Complex (3 fires), Yellowstone NP. Previously reported incident. Twenty-six miles southeast of Gardiner, MT. Creeping fire. Last report unless significant activity occurs.

This table does not include fires reported in the large fire section of this report. Updated weekly.

Predictive Services Discussion: A slow-moving upper low will cross the central Rockies, producing scattered showers and thunderstorms across Wyoming, Colorado and part of New Mexico. Otherwise, the West will be warm and dry. A stalled cold front from the central Plains to the mid-Atlantic coast will produce showers and thunderstorms from western Texas and Oklahoma to Pennsylvania and Virginia. The northern Plains and Great Lakes region will be cool and dry. The Gulf coast region and the Southeast will continue to be warm and humid.

<http://www.predictiveservices.nifc.gov/outlooks/outlooks.html>

Today's discussion is from the Entrapment Category.

FIRE SHELTER DEPLOYMENT

Firefighters must never rely on fire shelters, but instead should depend on well-defined and pre-located escape routes and safety zones. However, if the need for shelter deployment should ever arise, it is imperative that the firefighter knows how to deploy and use the shelter.

- Don't think of your fire shelter as a tactical tool.
 - Recognize when deployment is your only option. When considering escape, remember that you can hold your breath for only about 15 seconds while running through flames or superheated air.
 - If time runs out while attempting to escape, get on the ground before the flame front arrives and finish deploying on the ground. Death is almost certain if the fire catches a person off the ground. (The optimal survival zone with or without a shelter is within a foot of the ground.) Once entrapped, the highest priority is to protect the lungs and airways.
 - When deploying, remove packs and place them away from the deployment area.
 - Even though deploying your shelter is a last resort, time is critical when entrapped. Play it safe; give yourself ample time to deploy. Failure to adequately anticipate the severity and timing of the burnover and failure to utilize the best location and proper deployment techniques contributed to the fatalities and injuries on the Thirty Mile incident. Don't let the cost of opening a shelter become a factor in your decision.
 - Before passing through superheated gases, try to close the front of your shroud. You can take your shelter out of the plastic bag and use it for a heat shield to pass quickly through a hot area. If you use the shelter in this way, don't drop it or allow it to snag on brush. Remember that your lungs are still vulnerable.
 - If flames contact the shelter, the glass/foil fabric heats up more rapidly. If flame contact is prolonged, spots of aluminum foil can melt or tear away, reducing protection. Even if this happens, it is still safer inside the shelter. Your flame-resistant clothing becomes your backup protection. It's even more critical to keep your nose pressed to the ground and stay in your shelter.
 - Remember, direct contact with flames or hot gases is the biggest threat to your shelter. It is vital to deploy in a spot that offers the least chance of such contact. The heavier the fuels, the bigger your fuel break needs to be.
 - Remember, once you commit yourself to the shelter, stay there. No matter how bad it gets inside, it is usually much worse outside. If you panic and leave the shelter, one breath of hot, toxic gases could damage your lungs. Suffocation may follow. Most firefighters were killed as a result of heat-damaged airways and lungs, not by external burns. Protect your airways and lungs at all costs by keeping your face close to the ground and staying in your shelter.
1. ***If your crew becomes entrapped, identify everything you and your crew/team are going to do to survive (start your discussion using pages 28-29 in your IRPG).***
 2. ***Activity: Consider having a mock fire shelter deployment exercise in realistic terrain and fuels using practice shelters (no live fire). Assess the exercise using an AAR.***
