National Interagency Coordination Center Incident Management Situation Report Tuesday, October 16, 2012 – 0530 MT National Preparedness Level 1

National Fire Activity

Initial attack activity: Light (64 new fires)

New large fires: 0 (*)
Large fires contained: 1
Uncontained large fires: ** 6
Area Command Teams committed: 0
NIMOs committed: 1
Type 1 IMTs committed: 0
Type 2 IMTs committed: 1

Link to Geographic Area daily reports.

Southwest Area (PL 1)

New fires: 1
New large fires: 0
Uncontained large fires: 1

Big Canyon, Tonto NF. Fifteen miles northeast of Payson, AZ. Logging slash, brush and grass. Moderate fire activity with torching and spotting. Trail closures in effect.

This table does not include fires reported in the large fire section of this report. <u>Updated weekly.</u>

Predictive Services Discussion: A strong ridge of high pressure off the California Coast will maintain warm and dry conditions over California, over the Desert Southwest and over the Great Basin. A weak ridge of high pressure will bring warmer temperatures and low humidity to the Gulf Coast and the East Coast. A cold front will bring a few showers and thunderstorms to the Plain States. A trough will continue to bring cool temperatures and showers to the Pacific Northwest and Northern Rockies.

http://www.predictiveservices.nifc.gov/outlooks/outlooks.html

Minutes FOR SAFETY

Today's discussion is from the Fireline Safety Category.

TRANSFER OF COMMAND

Risks to fireline personnel increase significantly during transfer of command periods regardless of the size or complexity of the incident. There is a high potential for fatalities, serious injuries, or incidents with potential during transfer of command periods (some have occurred in the past). Be proactive in mitigating the risks by proper implementation of LCES—Lookout, Communications, Escape Routes, and Safety Zones.

- Factors for increased risks to fireline personnel during transition periods include:
 - No, or poor, briefing of incoming personnel
 - · Lack of fire weather and behavior information, both forecast and observed
 - Communications; face-to-face briefings may not be possible and radio frequencies may be overextended and/or changing due to the increased demands on the system.
 - Initial attack resources may not have checked-in and the Incident Commander may not be aware of the number, type and location of all resources.
 - Location of safety zones and escape routes may not be known and communicated to all resources.
 - Not all Resources know who is in command.
- Mitigation actions to take:
 - Lookouts: Post and maintain your own lookouts.
 - Communications: Maintain existing communications with your own and adjacent resources, as well as your original supervisor, while you are developing communications with incoming adjacent resources and your new supervisor.
 - Escape routes and safety zones: Identify escape routes and assure incoming resources
 are aware of their locations; be aware that your original escape routes and safety zones
 may no longer be accessible due to changing fire behavior or your increased distance
 from them.
 - Transition at the morning briefing
 - Utilize the Incident Response Pocket Guide transition checklist
