

**National Interagency Coordination Center
Incident Management Situation Report
Friday, February 8, 2013 – 0800 MT
National Preparedness Level 1**

National Fire Activity (Weekly Total)

Initial attack activity: Light (313 new fires)
 New large fires: 1 (*)
 Large fires contained: 1
 Uncontained large fires: ** 1
 Area Command Teams committed: 0
 NIMOs committed: 0
 Type 1 IMTs committed: 0
 Type 2 IMTs committed: 0

** Uncontained large fires include only fires being managed under a full suppression strategy.

Southern Area (PL 1)

New fires: 297
 New large fires: 1
 Uncontained large fires: 1

* **WFU**, Georgia Forestry Commission. Twenty-eight miles northeast of Waycross, GA. Timber and hardwood litter. No further information received.

Predictive Services Discussion: A strong winter storm will move through New England by Saturday, leaving heavy snow from New York to Maine before exiting into the North Atlantic. Meanwhile, a Pacific storm will move through the interior West, bringing snow to the Great Basin and Rockies by Sunday. This storm system will move rapidly through the central Plains producing rain and strong thunderstorms in the South and heavy snow to the northern states. It will then move through the Mississippi Valley and off the East Coast by midweek. Below normal temperatures will continue across the northern half of the country through the end of the week.

INITIAL ATTACK FIRE SIZE-UP/SAFETY

Fireline Safety Category

Having a good size-up is important in order to give both the Incident Commander (IC) and fire management a good idea of what problems exist and what resources may be needed for effective firefighting.

- Use the following reporting factors for size-up and reference local fire size-up cards. Discuss others that may be used.
 - Fire name and location
 - Terrain (slope, aspect, elevation) and position of fire on the slope
 - Size of fire
 - Fuel type, anticipated control problems, and spread potential
 - Values threatened
 - Weather conditions (wind speed and direction)
 - Fire behavior
 - Resources on the fire and those needed
 - Estimated containment and control times
 - Cause (known, suspected, under investigation)

- After your initial size-up of the fire and/or transition from an initial attack IC, answer the following questions. Repeat this analysis whenever there is a change, or predicted change, in conditions on the fire.
 - Have you sized up the fire and relayed the information to dispatch?
 - Is the observed fire weather consistent with the forecast?
 - Can you control the fire with the resources available (on the incident or soon to be on the incident) and under the expected conditions?
 - Have you developed a plan to attack the fire (direct or indirect, anchor points, escape routes, head or flank attack, priority areas); and have you communicated this information to all personnel assigned to the incident, including new arrivals?
 - Are lookouts in place or can you see all of the fire area?
 - Can you communicate with everyone on the fire and with dispatch?
 - Are escape routes and safety zones established? If you are using the black, is it completely burned and without a re-burn potential?
 - Are safety and the standard fire orders being followed and/or mitigated?
 - Do you have a complete list of what resources have been ordered for the fire?
 - Will you control the fire before the next operational period; and if you won't, or the size of the organization exceeds the IC's capability to manage, have you informed the agency Fire Management Officer?
