Predictive Services Discussion: Strong high pressure will keep extreme heat in place over the much of the West. Scattered thunderstorms will develop over the northern Rockies and the Front Range from Wyoming to New Mexico. Widely scattered thunderstorms will also form over parts of the Northwest with isolated thunderstorms possible over the Sierras and the Great Basin. In the East, mild conditions will spread through the northern Plains, across the Upper Midwest and Ohio Valley, and into New England behind a cold front. Scattered showers and thunderstorms will move through much of the Eastern U.S. In Alaska, temperatures will fall slightly as widely scattered thunderstorms form over the west and central sections. Isolated thunderstorms are possible over the eastern Interior.

# CONSTRUCTING LINE WITHOUT A SAFE ANCHOR POINT 

Fireline Safety Category

When deciding where to build fireline, the following considerations must be weighed:

- Can you hold the line without the fire hooking under/around you? How do you protect against losing the line and ensure your safety if there is a danger of the fire hooking around you?
- Are there adequate safety zones and escape routes? Review what constitutes an adequate safety zone and escape route. Who has the responsibility to designate them and continue to make sure they are adequate?
- Can you develop your starting point into an anchor point? List some good anchor points. Describe how you would develop your starting point into an anchor point.
- Have you posted good lookouts? Where should the lookout(s) be posted? Who can be a lookout?
- Do you have good communications? Who do you need to be in contact with? If the communications are not good, what can you do to improve them?
- To reduce the risks, start the line in another location. Talk about fires where you have had to relocate the line because your anchor point did not hold the fire.
- Do you have a lookout posted? Can they see the main fire?
- How have you mitigated Watchout Situation \#8?
