## Other Fires

(As of July 19)

| GACC | Fires | Cumulative <br> Acres | Crews | Engines | Helicopters | Total <br> Personnel |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: |
| AK | 33 | 491,765 | 0 | 0 | 0 | 0 |
| NW | 4 | 2,428 | 2 | 1 | 5 | 84 |
| NO | 0 | 0 | 0 | 0 | 0 | 0 |
| SO | 1 | 169 | 21 | 9 | 7 | 6 |

Predictive Services Discussion: Scattered showers and thunderstorms will continue across the Four Corners region with heavy rain possible in parts of Arizona and New Mexico. Hot and dry conditions will remain over California, the Northwest, northern and western Great Basin, and the northern Rockies. Very warm and humid weather will persist in the central and eastern United States with scattered showers and thunderstorms developing from the Gulf region to New England and over the Great Lakes. Alaska will be cooler with scattered showers throughout the state.

# EXTREME FIRE BEHAVIOR 1 

## Weather / Fire Behavior Category

Scenario

Mild, moderate and EXTREME fire behavior has always been present in cases of shelter deployment. It is critical for firefighters to maintain situational awareness of live and dead fuel moisture conditions as well as predicted and current weather conditions. As fire behavior changes, it is critical to act decisively to the changing situation.

- Discuss the following indicators of extreme fire behavior:
- Relative humidity less than $15 \%$
- 1 -hour fuel moisture less than $5 \%$
- Transition from surface to crown fire
- Smoldering fires that exist in the early part of the day are beginning to burn very actively as the day progresses.
- Approaching thunderheads with dark clouds beneath
- Presence of dust devils indicating an unstable atmosphere
- Increased spotting
- Sudden calm
- High clouds moving fast in direction different from surface wind
- Predicted Haines Index of 5 and 6 in those areas where this level is a good indicator of atmospheric instability
- Fire whirls
