Predictive Services Discussion: Scattered showers and thunderstorms will develop over the northern and central Rockies and parts of the central Great Basin. Isolated storms will form over higher terrain in the Southwest. Rain and thunderstorms will move into the northern and central Plains. Scattered showers will linger over New England and parts of the Southeast coast. Near normal temperatures will continue in the West with cool conditions from the northern Rockies to New England and south to the mid-Mississippi Valley. Warm to very warm and humid weather will continue from Texas the mid-Atlantic coast.

# ON A HILLSIDE WHERE ROLLING MATERIAL CAN IGNITE FUEL BELOW 

Fireline Safety Category

When firefighters find themselves in Watchout Situation \#13, they must answer the following questions:

- Can you locate/construct a line to prevent material from rolling below? What do you call line that catches rolling material? Describe how you would construct this type of line and what factors you would have to consider (e.g., slope, fuels, etc.)
- Will you get enough warning of rolling material to prevent being hit by it? Who needs to be watching for rolling material? What kinds of warning systems could you establish?
- Can you see where any material that rolls below you goes and what it does? What can happen when material rolls out of the fire and below you out of view? What needs to be done to mitigate this danger?
- Is the area free of large amounts of flashy fuels? Review the Common Denominators of Tragedy Fires.
- Is the area free of chimneys, gullies, and steep slopes? Review the Common Denominators of Tragedy Fires.
- Do you have two escape routes so you can go either way? Talk about where your most likely escape routes and safety zones will be when you are on a hillside where rolling material can ignite fuel below.
- To reduce the risks:
- Post lookouts.
- Consider locating line in a defensible position.
- Talk about steep fires where you have had material rolling out below you and how you dealt with it.
