Predictive Services Discussion: Scattered showers and thunderstorms will form over the Four Corners region. Isolated to widely scattered thunderstorms will develop over parts of western Montana, central and northern Idaho and parts of Oregon and Washington. Windy conditions will develop across the Sierra and the western Great Basin. Temperatures in the West will be mild over the mountains and along the Northwest coast, but warmer in lower elevations. In the East, scattered showers and thunderstorms will develop across the Gulf Coast region. Scattered showers will move through the upper Midwest. Temperatures will remain very warm over the Plains and through the South, with mild conditions in the Great Lakes region and New England.

# ATV - How to Properly Ride and Operate 

Motorized Operations Category

Riding an ATV correctly allows the operator to operate and control the machine more easily, and react more quickly to changes in terrain and environment. Proper riding posture includes:
$\checkmark$ head and eyes up, looking forward;
$\checkmark$ shoulders relaxed, with elbows bent slightly;
$\checkmark$ hands on the handlebars; knees in toward the gas tank;
$\checkmark$ feet on the footrests, toes pointing straight ahead;
$\checkmark$ back should be straight but not tense

- To turn an ATV, keep most of your body weight on the outside foot peg and lean your upper body into the turn. Never lower your foot to the ground for stability-could cause ejection if foot is caught by tire.
- When climbing hills, shift your body weight forward to keep the front wheel(s) on the ground.
- If stopped while going uphill, do not apply the rear brake only. Apply equal pressure to both front and rear brakes, but never only to the rear brake. Get off the machine and turn it around to proceed down the hill.
- When going downhill, keep the engine running and in low gear, apply both front and rear brakes with even pressure and avoid sharp turns. Slide body forward on seat towards gas tank, keeping body weight back by leaning backwards. This will help keep weight on back wheels and lessen potential to flip ATV over forward. Avoid "side hill" situations. When they are unavoidable, lean into the hill.
- When carrying a load up hill, if possible, place load on the front of the ATV to help keep the front end of the ATV from flipping over. If going downhill, place load on back of ATV to help keep the ATV from flipping over forward. If loads cannot be adjusted, (drip torch mounted on back), try to equalize the load on front and back if possible.
- Only operate an ATV under the conditions for which you have been trained, qualified for and are experienced in riding.
- As a last resort to avoid an impending collision, roll off the vehicle and kick yourself free of it.
