Predictive Services Discussion: Scattered thunderstorms with heavy rain will move through southern California, Arizona, Utah and western parts of Colorado and New Mexico. Isolated thunderstorms will develop over the Northwest and the northern Rockies. Windy conditions will persist in the western Great Basin. Temperatures in the West will remain cool to mild in the Northwest and in the mountains. Warm weather will continue in the lower elevations. Hot weather will continue across much of the Plains and East, except in the Northeast where mild conditions will exist. Scattered thunderstorms will form along the Gulf Coast and around the Great Lakes.

# Safety Zones (part 2) 

LCES (Lookouts, Communication, Escape Routes, and Safety Zones) Category

Safety Zone(s) are locations where the threatened firefighter may find refuge from the danger. Unfortunately shelter deployment sites have been incorrectly called safety zones. Safety zones should be conceptualized and planned as a location where no shelter is needed. This does not intend for the firefighter to hesitate to deploy their shelter if needed, just if a shelter is deployed the location is not a tree safety zone. Fireline intensity and safety zone topographic location determine safety zone effectiveness.

- How have you determined the distinction between a safety zone and a deployment zone?
- Is refuge in a vehicle, house an acceptable tactic?
- Consider access to the incident. You are often confronted with considerable distances of unburned fuel to cross. How do you mange LCES?
