# National Interagency Coordination Center Incident Management Situation Report Tuesday June 24, 2014 – 0530 MT National Preparedness Level 1

## **National Fire Activity**

Initial attack activity: Light (92 new fires)

New large fires: 0 (\*)
Large fires contained: 1
Uncontained large fires: \*\* 3
Area Command Teams committed: 0
NIMOs committed: 0
Type 1 IMTs committed: 0
Type 2 IMTs committed: 2

Link to Geographic Area daily reports.

## Southwest Area (PL 3)

| New fires:               | 35 |
|--------------------------|----|
| New large fires:         | 0  |
| Uncontained large fires: | 2  |
| Type 2 IMTs committed    | 1  |

**Asaayi Lake**, Navajo Region, BIA. Transfer of command from IMT 2 (Day) back to the local unit will occur 6/26. Three miles southeast of Crystal, NM. Logging slash, timber and brush. Creeping and smoldering. Residences threatened.

**Dehose**, Fort Apache Agency, BIA. Four miles east of Cibecue, AZ. Pinyon pine, juniper and grass. Active fire behavior with spotting.

**Predictive Services Discussion:** A weak trough of low pressure will move from the Pacific Northwest into the northern Rockies today with showers and thunderstorms. This will push an upper level ridge of high pressure eastward into the central Rockies for warm and dry conditions that will extend through the Southwest U.S. with hot and breezy weather. A cold front stretching from the Upper Midwest through the southern Plains will be a focus for scattered thunderstorms, but widespread showers are possible across much of the eastern U.S., as a broad low pressure trough remains. Scattered showers and thunderstorms will continue for all but the eastern portion of Alaska today.

# **HAZARD TREE - NO WORK ZONES (NWZ)**

Felling Safety Category

Knowing when the exact time a given hazard tree (or compromised section) will fail is an extremely difficult, and is, in many cases, an unpredictable task. Given this fact, we need to manage firefighters' exposure to these hazards by creating a safe work area or NWZ. The size and extent of the NWZ must be determined by onsite conditions, such as terrain, lean, active fire in the tree and adjoining trees.

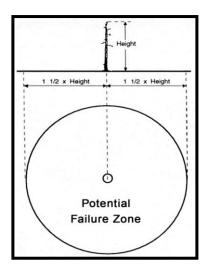

No-work zone contains **Burned** area a high density of potentially dangerous trees or high-value wildlife trees.

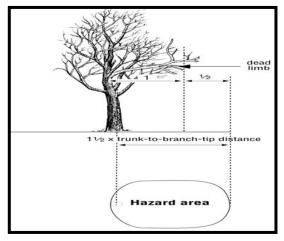

When an identified hazardous tree cannot be felled, then perform an assessment of which areas have too high a risk, and post a lookout to

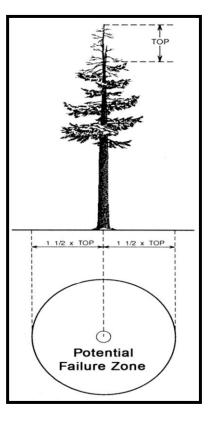

warn the personnel to stay clear of these areas while working in adjacent areas. If hazard still exists before leaving the area, flag the NWZ so that personnel entering the area will be able to recognize the hazard. Use the following failure zone illustrations as examples to help manage firefighter exposure to these identified hazards. Also remember to include the possibility of the "Domino Effect" to surrounding trees.

Figure 1 – 1 1/2 X Height of snag Figure 2 – 1 1/2 X trunk-to-branch-tip distance

Figure 3 - 1-1/2 X length of dead top.
