Predictive Services Discussion: It will be breezy today in the Pacific Northwest, but cooler temperatures and increasing dew points will provide higher relative humidity values. Widely scattered showers and thunderstorms are expected in northern Washington and Idaho as a trough of low pressure begins to dive southward. California, Nevada, and the Four Corners region of the southwest U.S. will also see showers and thunderstorms associated with moisture trapped under a high pressure ridge. The Gulf Coast states through the Appalachian Mountains can expect rainfall and thunderstorms along a stalled frontal boundary being fed by a rich moisture tap.

## NO COMMUNICATION LINK WITH CREW MEMBERS, SUPERVISORS \& ADJOINING FORCES

Fire Communication Category

Watchout Situation \#7 is a danger that must be mitigated by maintaining good communications while working on fires. Firefighters must constantly ask themselves the following questions as situations change on the fireline:

- Can communications be established?
- Talk about how communications are set up on fires.
- Review situations where communications were a problem and what was done to fix the problem.
- Do you need a repeater setup or can an experienced firefighter act as a human repeater?
- Is the communication triangle complete?
- Review the communication triangle and where it comes up in the " 10 Standard Fire Orders" and the "18 Watchout Situations."
- Discuss ways that firefighters can maintain the communication triangle on the fireline.

Reduce the risks

- If the situation is complex, wait until communications are in place.
- Talk about the fires where crews had to leave the line, didn't go out on the line, or something negative happened because communications were inadequate. Discuss what was done to establish communications.
