Predictive Services Discussion: High-based thunderstorms in the Pacific Northwest and Great Basin may produce gusty outflow winds today, along with some locally heavy rainfall. Otherwise, it will remain hot and dry in the western U.S. under a ridge of high pressure. Elsewhere there will be heavy rainfall from showers and thunderstorms in the southwest U.S. and southern Rockies of New Mexico, where monsoonal moisture is plentiful. An upper level trough over the Ohio Valley will also provide instability for showers and thunderstorms from the Mississippi Valley through the Appalachian Mountains.

## CONSTRUCTING LINE WITHOUT A SAFE ANCHOR POINT

Operational Engagement

When deciding where to build fireline, the following considerations must be weighed:

- Can you hold the line without the fire hooking under/around you? How do you protect against losing the line and ensure your safety if there is a danger of the fire hooking around you?
- Are there adequate safety zones and escape routes? Review what constitutes an adequate safety zone and escape route. Who has the responsibility to designate them and continue to make sure they are adequate?
- Can you develop your starting point into an anchor point? List some good anchor points. Describe how you would develop your starting point into an anchor point.
- Have you posted good lookouts? Where should the lookout(s) be posted? Who can be a lookout?

Do you have good communications? Who do you need to be in contact with? If the communications are not good, what can you do to improve them?

- To reduce the risks, start the line in another location. Talk about fires where you have had to relocate the line because your anchor point did not hold the fire.

Do you have a lookout posted? Can they see the main fire?

- How have you mitigated Watchout Situation \#8?
