**Predictive Services Discussion:** Deep moisture will move into the northern half of the West, bringing scattered thunderstorms and rain to much of the Great Basin and the central Rockies. Showers and thunderstorms will increase in northern California and the Northwest. Widely scattered thunderstorms will move into the northern Rockies late in the day. Temperatures will moderate as clouds and higher humidity move into the region. Thunderstorms in the Southwest and southern Great Basin will decrease. Scattered thunderstorms will form along the Gulf and East coasts with heavier storms and rain along the Southeast coast and Florida associated with a tropical disturbance.

# **AVIATION COMMUNICATIONS**

Aviation Category

Discuss the following information in terms of effective communication with aircraft. Involve the pilot in this discussion.

- Establish an air-to-ground frequency on the fire, and make sure everyone knows what it is.
- Avoid switching frequencies in the middle of an operational period.
- Discuss Guard frequencies:
  - How they work.
  - When to use them.
  - What frequencies are established for aircraft in your area?
- Aviation communications should be clear, concise, short, and to the point.
- Use standard terminology that can be understood by all people you are talking to.
  Do not use local slang.
- Know what you want to say before you key the microphone. Don't think and talk at same time.
- Before you key your microphone to talk, be sure to listen to ensure you don't cut into another transmission
- Identify who you want to talk to by the call sign and identify yourself in every transmission.
- If the frequency gets congested, request another frequency. Upon receipt, ensure that all people who need to be on the new frequency transfer to that frequency.
- When giving ground descriptions, describe the location as if you are viewing the location from the direction an aircraft would be traveling. Use a common frame of reference for the sender and receiver.
- Use easily understandable directions, such as north, south, east, west, 2 o'clock, 9 o'clock, left 20 degrees, right 45 degrees, etc.
- When giving directions, always give them in relation to the pilot's perspective.
