Predictive Services Discussion A ridge of upper level high pressure over the Great Basin will continue to bring hot and dry conditions to much of the western U.S. High based showers and thunderstorms are expected again today in portions of California and Nevada with wet storms in the Rockies and southwest U.S. Another weak impulse will move east through the Pacific Northwest and northern Rockies with drying and gusty winds. Scattered showers and thunderstorms may produce severe weather over the central Plains region today, while further east, widespread showery and cool weather is anticipated from the Ohio Valley through the Atlantic Coastal region where a deep trough of low pressure is digging eastward. In Alaska a short wave ridge of high pressure will bring some warming and drying conditions, but locally breezy winds.

June 30 - July 6, 2015

## Introduction

Look at the times below...Careful analysis of wildland fire fatality statistics and records reveal that most (not all) burnover events have occurred between 1400 and 1630. Taking a tactical pause at 1400 may be an appropriate time for line-going and operational personnel to step back for a moment and reevaluate their situational awareness. It can be used as an opportunity to remember that this is the beginning of a dangerous part of the day for fighting fires and increased caution is in order.

Throughout the week of June 30-July 6, we encourage you and your crew to consider using the idea of "Take 5@2" and to use the tools in each 6 Minutes for Safety to help assess the reality of your current situation.

Today is dedicated to the 19 firefighters that lost their lives on the Yarnell Hill Fire in Arizona 2 years ago today.
