Predictive Services Discussion A ridge of high pressure remains over the Great Basin and will strengthen as it builds northwestward into northern California and the Pacific Northwest. Very hot temperatures will result over the western U.S. with dry and locally breezy conditions in the Pacific Northwest and northern Rockies. Showers and thunderstorms will form along the western periphery of the high pressure ridge in California, the Great Basin and the central Rockies. Although some storms may produce precipitation and locally heavy rainfall, widespread wetting rain is not expected. East of the Rockies, scattered showers and thunderstorms will form along a stationary frontal boundary stretching from the southern High Plains through the Tennessee Valley. Showers and thunderstorms are expected today in Alaska, with a continuation of cool and mild weather.

## Escape Routes

It's 1400...you have been working all morning. How far away have your safety zones become? Safety zones are only good if you can reach them. How long will your escape route take? What is the condition of the crew? How long will it take your slowest member to get there? Are your expectations realistic?

Look at the times below...if your fire blew up right now, can you and every member of your crew make it to your safety zone?

[^0]:    * Sisters, Galena Zone, BLM. Eighteen miles southeast of Saint Michael, AK. Short grass. Active fire behavior with running, backing and creeping. Last report unless significant activity occurs.

[^1]:    ${ }^{* * *}$ Changes in some agency YTD acres reflect more accurate mapping or reporting adjustments. ***
