Predictive Services Discussion High pressure will weaken slightly over the West as a trough in western Canada drops toward the northern Rockies. Meanwhile, a wave rotating through the Southwest and along the West Coast will produce scattered showers and thunderstorms over the southern and central Rockies, the western Great Basin and the Sierras. Isolated thunderstorms will develop across the far northern Rockies along a cold front pushing into the U.S. A cold front sliding through the eastern U.S. will produce rain and thunderstorms from Texas to New England. Temperatures will remain high across the West with 90s to 112 across most of the interior West. The mountains will see 70s and 80s. East of the Rockies, the readings in the 80s to mid 90s will cover the Plains and southern coasts, 60s and 70s across the mid and upper Mississippi Valley to New England.

In Alaska, high pressure will rebuild over the state, bringing warming and drying to the Interior. Scattered showers and thunderstorms will develop in the Southwest.
