Predictive Services Discussion Widely scattered thunderstorms will form over northern California and southern Oregon. Scattered showers and thunderstorms will continue over the central and southern Rockies, some producing brief heavy rain. Temperatures around the West will be slightly cooler as high pressure weakens over the region. East of the Rockies, a cold front from Texas to Great Lakes will trigger rain and thunderstorms. High pressure over the Upper Midwest will bring cooler weather to the northern and central Plains while warm and humid conditions remain over the South and East.

In Alaska, scattered thunderstorms will develop over the south. Temperatures will cool slightly.

# IN COUNTRY NOT SEEN IN DAYLIGHT 

Operational Engagement Category

Often firefighters arrive on a fire after dark. This is recognized as Watchout Situation \#2. Before safely fighting fire in country not seen in daylight, firefighters must be able to answer the following questions:

- Can the resources you are replacing give you a thorough briefing? Identify whom you might get information from. Can you meet up with the departing overhead/resource leaders?
- Can you observe the area/use scouts? List ways you could observe the area you need to work.
- Have escape routes and safety zones been thoroughly scouted and marked for night use? Talk about what constitutes an escape route and a safety zone; who would identify them; and in what ways might they be marked.
- Have potential dangers been located; can they be mitigated? What are the dangers associated with Watchout Situation \#2? How can they be worked around?
- Reduce the risks by:
- Posting lookouts.
- Checking communications.
- Retreat if you have doubts about your escape routes or safety zones or the situation becomes too complex. Give examples of arriving on a fire after dark and what was done to allow you to fight fire safely in country not seen in daylight.
- Identifying prominent geographic features
