National Interagency Coordination Center Incident Management Situation Report Saturday, July 25, 2015 - 0530 MT National Preparedness Level 2

| National Fire Activity | |
|-------------------------------|-----------------------|
| Initial attack activity: | Light (124 new fires) |
| New large incidents: | 4 |
| Large fires contained: | 3 |
| Uncontained large fires: ** | 10 |
| Area Command Teams committed: | 0 |
| NIMOs committed: | 0 |
| Type 1 IMTs committed: | 2 |
| Type 2 IMTs committed: | 5 |
| | |

** Uncontained large fires include only fires being managed under a full suppression strategy.

Link to Geographic Area daily reports.

Eight wildland fire suppression crews and eight fireline management personnel are assigned to support large fires in Alberta, Canada. Two wildland fire suppression crews and twenty-four fireline management personnel are assigned to support large fires in Saskatchewan, Canada. Additionally, several states are supporting Canada through interstate forest fire compacts.

| Northwest Area (PL 2) | |
|--------------------------|---|
| New fires: | 7 |
| New large incidents: | 4 |
| Uncontained large fires: | 6 |
| Type 2 IMTs committed: | 2 |

* **Rye**, Wallowa Unit, DOF. Started on private land four miles northeast of Paradise, OR. Brush and tall grass. Active fire behavior with uphill runs, flanking and backing. Structures threatened.

Blue Creek, Southeast Region, DNR. IMT 2 (Ciraulo). Started on private land 10 miles east of Walla Walla, WA. Timber and brush. Moderate fire behavior with flanking, backing and creeping. Numerous structures threatened. Evacuations, road, area and trail closures in effect.

* **Hatch Grade**, Washington State Fire Marshal's Office. Fifteen miles north of Helix, OR. Short grass. Active fire behavior with wind-driven runs.

* **0451 RN**, Prineville District, BLM. Nine miles southeast of Dufur, OR. Brush, tall grass and short grass. Active fire behavior with wind-driven runs.

* **North Boulder 2**, Colville NF. IMT 2 (Rabe). Twenty-seven miles northwest of Colville, WA. Timber. Moderate fire behavior.

Corner Creek, Ochoco NF. Eleven miles south of Dayville, OR. Timber. No new information.

Predictive Services Discussion: An upper level trough of low pressure in the Pacific Northwest will bring a weak cold front into the region with a chance of showers and isolated thunderstorms, mainly west of the Cascade Mountains. Warming and drying will develop for portions of the southwest U.S. including California and the southern half of the Great Basin. It will also be relatively warm and dry on the western side of the Rocky Mountains. East of the Continental Divide, there will be showers and thunderstorms on the Plains as well as the Gulf Coastal region, including Florida, where a frontal boundary will be the focus for heavy precipitation. Alaska will see seasonal temperatures with a chance of showers and thunderstorms.

Hazard Trees – Situational Awareness

Felling Safety Category

Snags (dead, standing trees without leaves or needles in the crowns) and green hazard trees present a significant threat to wildland firefighter safety. Snags typically have much lower fuel moistures than live, green trees; and they burn more readily. In the process, they often throw off embers creating spot fires in advance of the main fire. Snags may burn through more quickly than green trees and can fall without warning. Live, green trees weakened by insects, disease, weather, fire, and age presents another hazard and they can also fall without notice.

- The risk of serious injuries from hazard trees may increase during the night operational period when visibility is reduced.
- While work in cooler, nighttime environments can help control efforts, it also presents an increased risk from unseen falling snags and weakened live trees. Night operations should be restricted in areas of high risk rated dead and dying trees.
- Environmental conditions that increase risk from hazard trees: Strong or gusty winds from storm cells. Air operations - water or retardant drops, rotor wash from helicopters. Steep slopes with rolling material. Erosion and undercut root systems. Diseased or bug-killed areas (Mountain Pine Beetle).
- Things to consider when assessing the potential dangers of hazard trees: Trees have been burning for an extended period. High-risk tree species (those that are known for rot and shallow root systems) in the area. Numerous downed trees/material. Broken tops and dead limbs overhead. Accumulation of downed limbs, tree decay, cavities, splits, cracks, lack of needles, bark, limbs or other indicators of overhead hazards. Roots damaged by equipment, fire or erosion create hazards.
- Mitigation measures to take: Identify and establish No-Work-Zones (NWZ) in all high-risk areas until the hazard has been mitigated. Instruct firefighters of established NWZ in briefings. Identify with flagging/signs, and show area on maps. Establish lookouts to protect NWZs. Assign only qualified sawyers and Falling Bosses. Order additional professional fallers in advance. Use heavy equipment, and blasters when appropriate. Plan a quick and safe escape routes. Do not turn your back on a falling tree or known hazard. Use lookouts to maintain secure felling areas. Maintain situational awareness.
