**Predictive Services Discussion:** Active weather is expected for the northwest quarter of the Nation today with scattered showers and thunderstorms ahead of a strong cold front across the Pacific Northwest through northern Rockies. This will bring gusty winds and the possibility of severe weather this afternoon as the front makes its way into Montana. For the rest of the Intermountain West, monsoonal moisture will continue to deliver thunderstorms and breezy winds from the Great Basin eastward through the central Rockies. In contrast, California will see dry and very hot conditions as high pressure builds westward. Further east, a trough of low pressure and associated frontal boundary will provide unsettled weather from the Great Lakes through New England. It will remain dry and a little cooler from the southern Plains through most of the Gulf Coast and Mid-Atlantic. Alaska will see a warming and drying pattern with seasonal temperatures.

## VEHICLE ENTRAPMENT

*Vehicles & Roads Category*

If you find yourself in a fire entrapment situation where a shelter deployment is not possible, using a vehicle for refuge may be an option. The following are some considerations for a vehicle entrapment:

- Park the vehicle in an area void of vegetation.
- Burn out around the vehicle if there is time.
- Park behind a natural barrier or structure. Consider that a structure could become involved which could severely impact nearby exposures/vehicles (Harris Fire, SoCal, 2007).
- Do not park on the downhill side of a road or under power lines or over-hanging vegetation.
- Stay out of saddles and draws.
- Position the vehicle in a direction that provides the area occupied by crew personnel the maximum protection from an approaching flame front.
- Set the parking break, leave the motor running at high RPM, and keep the vehicle lights on
- Roll up the windows and do not lock the doors since someone else might need to get in.
- Cover windows with fire shelters with reflective material placed against window.
- You must protect your airway; remain as low in the vehicle as possible, and use a dry bandana to cover your nose and mouth.
- Expect the following conditions if you are trapped inside the vehicle:
  - Temperatures may reach over 200 degrees Fahrenheit.
  - Smoke and sparks may enter the vehicle.
  - Plastic parts may start to melt and give off toxic gases.
  - Windows may start to crack.
  - Exposed skin may receive radiant heat burns.
- If the vehicle catches fire, or windows blow out, and you must exit the vehicle before the fire has passed, then:
  - Each crewmember should cover themselves with a fire shelter.
  - Exit the vehicle from the side away from the greatest heat.
  - Stay together and get as low to the ground as possible, moving away from the vehicle.
  - Deploy your shelter in a safe area.
