Predictive Services Discussion: A cold front will move through north-central Idaho into the northern and central Rockies today with strong and gusty winds. Showers and thunderstorms are possible over the region as well as further south ahead of the front in the southern Rockies and Four Corners, but widespread wetting rain is not anticipated. Behind this front it will remain relatively dry and breezy over much of the Intermountain West, with locally windy conditions in eastern Washington. East of the Rockies, showers and thunderstorms are expected over the southern and central Plains, as well as the Gulf Coastal region.

# TRANSFER OF COMMAND 

Operational Engagement Category

Risks to fireline personnel increase significantly during transfer of command periods regardless of the size or complexity of the incident. There is a high potential for fatalities, serious injuries, or incidents with potential during transfer of command periods (some have occurred in the past). Be proactive in mitigating the risks by proper implementation of LCES-Lookout, Communications, Escape Routes, and Safety Zones.

Factors for increased risks to fireline personnel during transition periods include:

- No, or poor, briefing of incoming personnel.
- Lack of fire weather and behavior information, both forecast and observed.
- Communications; face-to-face briefings may not be possible and radio frequencies may be overextended and/or changing due to the increased demands on the system.
- Initial attack resources may not have checked-in and the Incident Commander may not be aware of the number, type and location of all resources.
- Location of safety zones and escape routes may not be known and communicated to all resources.
- Not all resources know who is in command.

Mitigation actions to take include:

- Lookouts: Post and maintain your own lookouts.
- Communications: Maintain existing communications with your own and adjacent resources, as well as your original supervisor, while you are developing communications with incoming adjacent resources and your new supervisor.
- Escape routes and safety zones: Identify escape routes and assure incoming resources are aware of their locations; be aware that your original escape routes and safety zones may no longer be accessible due to changing fire behavior or your increased distance from them.
- Transition at the morning briefing.
- Utilize the Incident Response Pocket Guide transition checklist.
