Predictive Services Discussion: Hot and dry conditions will persist over much of the western United States today underneath a ridge of high pressure. Clear, but smoky skies are expected over Northern California, the Pacific Northwest and Northern Rockies. Gusty winds may pick up in the afternoon over Northern California, Southern Oregon and Northwestern Nevada. A surge of monsoonal moisture will produce scattered showers and thunderstorms across portions of Southern California, the Southwest and the Great Basin, with dry thunderstorms likely in central Nevada and central Idaho. In contrast, an upper level trough brings cooler than normal temperatures to the eastern United States with showers from the upper Mid-west through the far Northeast and in the far southeast. Heavy rainfall will also continue in the Hawaiian Islands.

Hydration

Firefighter Health & First Aid

Dehydration is the result of the body trying to regulate its temperature naturally through sweating. Maintaining body fluids is essential for sweating. You must hydrate before, during, and after work.

- Studies conducted on wildland firefighters indicate that during fire suppression activities firefighters need to drink a minimum of 1 quart of fluid each hour of work.
- Before work you should take extra fluids to prepare for the heat. Drink 1 or 2 cups of water, juice, or a sport drink before work.
- While working drink at least 1 quart of fluid per hour. Drink as much as you can during the lunch break. Water is your greatest need during work in the heat.
- Hyponatremia (abnormally low concentration of sodium in the blood) as a result of excessive water intake a potentially life-threatening complication and can be prevented when rehydration is enhanced by fluids containing sodium and potassium, or when foods with these electrolytes are consumed along with water.
- After work it is important to continue drinking to replace fluid losses. Thirst always underestimates fluid needs, so you should drink more than you think you need.
- Unacclimatized workers lose more salt in the heat so they need to pay particular attention to salt replacement.
- Don't overdo salt intake; too much salt impairs temperature regulation. Excessive salt can cause stomach distress, fatigue, and other problems.
- You can assess your hydration by observing the volume, color, and concentration of your urine. Low volumes of dark, concentrated urine or painful urination indicate a serious need for rehydration. Other signs of dehydration include a rapid heart rate, weakness, excessive fatigue, and dizziness.
- Rapid loss of several pounds of body weight is a certain sign of dehydration. Rehydrate before returning to work; continuing to work in a dehydrated state can lead to serious consequences, including heat stroke, muscle breakdown, and kidney failure.

Discussion Points

- What are you doing right now to ensure that you are hydrated?
