Today is the last day that Canada Fires and Hectares will be tracked on the IMSR for 2015.

Predictive Services Discussion: An upper level low will move into the Canadian prairie, reinforcing cold air across the northwestern quarter of the U.S. High pressure over the eastern U.S. will keep hot, humid weather in place over the Plains and the Mississippi Valley. Widely scattered rain and snow showers will continue over the Northwest and northern Rockies while thunderstorms develop over the southern Rockies. Windy conditions will persist over the Great Basin to Wyoming. Showers and thunderstorms will move into the Upper Midwest along a cold front. Scattered thunderstorms will develop in the Southeast.

This report contains information derived from the National Fire and Aviation Management Web Applications (FAMWEB) system and other sources to provide relative information about emerging and ongoing incident activity. This information is considered operational in nature, is subject to change, and therefore may not match official year-to-date agency records.

## ** National Interagency Coordination Center **

## Preparedness Level 5

Operational Engagement Category

PREPAREDNESS LEVEL 5 (PL 5) means that nationally we are experiencing so many major incidents that there is potential to exhaust, or have exhausted, all agency fire resources. There are a number of factors which exist at this preparedness level that have the potential to impact firefighter safety:

9 Most or all levels of the fire management organization are operating at maximum capacity or even in crisis mode

- The incident support system is maxed out

9. Resources needed to accomplish incident objectives are unavailable

- Fatigue is impacting individuals at all levels of the organization

9 There is a sustained high operational tempo
We must be mindful that these conditions reduce our margin for error. The decisions we make have the potential to further reduce that margin, or to increase our capacity to cope with uncertainty.

Read the following scenario and imagine that you are in a similar situation...
It is PL5 and you are on a rapidly growing Type 3 incident. The fire is growing and the resources on the incident can't keep up with the demands of the fire. A type 1 team has been ordered but is not expected to arrive for multiple days. An engine crew has been exceeding their $2: 1$ work/rest for 3 days straight and is now overly fatigued both mentally and physically. The crew works a full day shift prepping line with chainsaws for the soon to start night shift of burn operations.

The engine is a part of a task force responsible for completing a back burn and holding the line without the ability to bring in extra resources if things don't go as planned. The engine crew consists of an ENGB, an assistant (very experienced firefighter), a first year crew member, and a fuels tech from the local district that has $4+$ years of fire experience but not as a primary fire fighter. The assistant is involved in the burn and is working for the Firing Boss, leaving the ENGB and two engine crew members to help with holding. Unfavorable winds during the night burn cause the firefighters to take smoke all night.

At about six hours into the burn the ENGB is faced with making a decision. The task force needs a Dozer Boss and since the ENGB is a trainee and the only option, is asked to leave their engine and provide direction to the dozer. At this point the ENGB takes a tactical pause to think about the timeline that got them to this point.

- Stories like this are not uncommon during PL 5 conditions; we operate at high tempos for long durations often with narrow margins for safety. Take this time to discuss how you could create margin in this situation or share a personal story where you were stretched operationally, and what you did.

9. Do we adjust our tactics during PL5 knowing that it is unlikely that we will get any additional resources?
10. Are there other circumstances when conditions like PL5 can occur?
11. What practices can you use to cope with the increase of expectations and operational tempo during PL 5 conditions?
