

**National Interagency Coordination Center
Incident Management Situation Report
Friday, March 11, 2016 – 0800 MT
National Preparedness Level 1**

National Fire Activity (Mar. 4 – Mar. 10)

Initial attack activity: Light (742 new fires)
 New large incidents: 32
 Large fires contained: 32
 Uncontained large fires:** 5
 Area Command Teams Committed: 0
 NIMOs committed: 0
 Type 1 IMTs committed: 0
 Type 2 IMTs committed: 0
 **Uncontained large fires include only fires being managed under a full suppression strategy.
[Link](#) to Geographic Area daily reports.

Southern Area (PL 2)

New fires: 595
 New large incidents: 22
 Uncontained large fires: 3

* **Mustang**, Osage Agency, BIA. One mile southwest of Bartlesville, OK. Tall grass and hardwood litter. Minimal fire behavior. Precipitation occurred over the fire area.

* **Katie**, Oklahoma DOF. Three miles southwest of Dustin, OK. Timber and short grass. Moderate fire behavior. Structures threatened.

* **Tombstone**, North Carolina Forest Service. Seven miles northwest of Casar, NC. Closed timber litter. Minimal fire behavior with smoldering. Last report unless significant activity occurs.

Additional wildfire information is available through the Geographic Areas at <http://gacc.nifc.gov/>

Predictive Services Discussion: An active weather pattern will continue to produce heavy precipitation through the weekend across the Gulf Coast, Mid-West and Pacific Northwest regions, including northern California. Some areas will also continue to see the threat of flash flooding including northern California and the Gulf Coast. The weather systems responsible for this activity will continue to bring a split flow of low pressure aloft with active cold fronts at the surface helping to initiate showers and thunderstorms across much of the eastern U.S. Heavy rainfall and mountain snow will continue over the Intermountain West this weekend and into next week with cooler temperatures, while much of the central Plains through the northeast U.S. will see warm readings much-above normal. By early next week a ridge of high pressure in the upper atmosphere will build into the southwest U.S. and strengthen over the western half of the Nation for a warming and drying trend. Meanwhile the central and eastern U.S. will see widespread wind along an expansive cold front accompanied by showers and thunderstorms.

AVIATION COMMUNICATIONS

Aviation Category

Discuss the following information in terms of effective communication with aircraft. Involve the pilot in this discussion.

- Establish an air-to-ground frequency on the fire, and make sure everyone knows what it is.
- Avoid switching frequencies in the middle of an operational period.
- Discuss Guard frequencies:
 - How they work.
 - When to use them.
 - What frequencies are established for aircraft in your area?
- Aviation communications should be clear, concise, short, and to the point.
- Use standard terminology that can be understood by all people you are talking to. Do not use local slang.
- Know what you want to say before you key the microphone. Don't think and talk at same time.
- Before you key your microphone to talk, be sure to listen to ensure you don't cut into another transmission
- Identify who you want to talk to by the call sign and identify yourself in every transmission.
- If the frequency gets congested, request another frequency. Upon receipt, ensure that all people who need to be on the new frequency transfer to that frequency.
- When giving ground descriptions, describe the location as if you are viewing the location from the direction an aircraft would be traveling. Use a common frame of reference for the sender and receiver.
- Use easily understandable directions, such as north, south, east, west, 2 o'clock, 9 o'clock, left 20 degrees, right 45 degrees, etc.
- When giving directions, always give them in relation to the pilot's perspective.
