* 1 Hectare $=2.47$ Acres

Predictive Services Discussion: A strong ridge continues to build over the central and southwestern U.S., holding a persistent low over the Northwest and a weakening trough in the East. Scattered showers and a few thunderstorms will continue across the Northwest and the northern Rockies. Breezy and gusty conditions will remain from California to Montana. A weak cold front will continue a slow trek through the Southeast, bringing more showers and thunderstorms to the Gulf states. Temperatures will warm over the northwestern U.S. but remain mild, while near record heat continues across the central and deep southwestern states. Mild conditions will hold over the eastern seaboard. In Alaska, a trough spreads showers and thunderstorms across the west and central sections of the state. Temperatures drop considerably across the western and central areas, while the eastern Interior remains warm.

## SERIOUS INJURY PROCEDURES

Firefighter Health \& First Aid

Dealing with serious injuries on the fireline can add even more stress to our hectic work environment. In the event a fireline accident occurs, adherence to the following principles is important to insure an adequate and appropriate response is made.

- Before entering the scene, determine whether it is safe to approach. Look for hazards as well as what may have happened. It may be necessary to move the patient or to make the area safe before doing an assessment.
- Provide first aid and assess the extent of the injuries.
- Make contact with your supervisor. Depending on the complexity of the fire, that could be your crew boss, the Division Supervisor, the IC, or even dispatch. If your fire has a medical plan, follow the plan.
- Provide them with accurate, concise information on the following
- Number of people injured
- Type of injuries
- Severity of injuries (light, moderate, severe, life threatening)
- Mechanism of injury
- Vital signs (pulse, respirations, level of consciousness, etc)
- Determine the best method of evacuation. Depending on the severity of injury or availability of resources, this decision may already be made for you.
- Keep the radio frequency clear of non-emergency traffic, provide updates of the patient's condition and await instructions.
- If evacuation is by helicopter, it may be necessary to construct a helispot. Document treatment provided in case it is necessary to send the information along with the patient in the aircraft.
- If the patient needs to be carried to a road, insure enough people are available to work in relays.
- Once the patient is clear, take a moment to write down witness statements, clean up notes and timelines, and document any other pertinent information.
