# National Interagency Coordination Center <br> Incident Management Situation Report <br> Sunday, June 26, 2016 - 0530 MT <br> National Preparedness Level 2 

## National Fire Activity

Initial attack activity:
New large incidents:
Large fires contained:
Uncontained large firec:**
Area Command Teams Committed: 0
NIMOs committed: 1
Type 1 IMTs committed: 4
Type 2 IMTs committed: 4
**Uncontained large fires include only fires being managed under a full suppression strategy.
Link to Geographic Area daily reports.

## Southern California Area (PL 4)

| New fires: | 21 |
| :--- | :---: |
| New large incidents: | 0 |
| Uncontained large fires: | 6 |
| Type 1 IMTs committed: | 2 |
| Type 2 IMTs committed: | 2 |

Erskine, Central California District, BLM. IMT 1 (Minton). One mile southeast of Lake Isabella, CA. Brush and short grass. Active fire behavior with wind-driven and uphill runs. Numerous residences threatened.
Evacuations, road, area, and trail closures in effect.
Marina, Inyo NF. IMT2 (Fogel). One mile northwest of Lee Vining, CA. Timber and brush. Minimal fire behavior with isolated torching, creeping, and smoldering. Numerous structures threatened. Evacuations and road closures in effect.

Fish, Los Angeles County FD. IMT 2 (Wakoski). IMT is also managing the Reservoir fire. Two miles northeast of Azusa, CA. Chaparral, brush, and tall grass. Minimal fire behavior. Numerous structures threatened. Road, area, and trail closures in effect.

Reservoir, Angeles NF. Three miles north of Azusa, CA. Chaparral, brush, and short grass. Minimal fire behavior. Structures threatened. Road and area closures in effect.

Border 3, Monte Vista Unit, Cal Fire. Cal Fire IMT 1 (Bravo). Two miles east of Potrero, CA. Chaparral, dormant brush, and tall grass. Minimal fire behavior. Trail closures in effect. Road and area closures have been lifted.

Sherpa, Los Padres NF. Nineteen miles northwest of Santa Barbara, CA. Chaparral and tall grass. Moderate fire behavior with isolated torching, creeping, and smoldering. Numerous residences threatened. Road, area and trail closures in effect.

## Southwest Area (PL 3)

| New fires: | 7 |
| :--- | :--- |
| New large incidents: | 1 |
| Uncontained large fires: | 6 |
| Type 1 IMTs committed: | 1 |

Cedar, Fort Apache Agency, BIA. IMT 1 (Pierson). Ten miles south of Show Low, AZ. Timber, brush, and short grass. Minimal fire behavior with backing, creeping, and smoldering. Structures threatened. Road closures have been lifted.

Sage-TCA, Truxton Canyon Agency, BIA. Twenty-eight miles northeast of Peach Springs, AZ. Timber, brush and short grass. Minimal fire behavior with flanking, backing, and creeping.

North, Cibola NF. Previously reported incident. Twenty-five miles southwest of Magdalena, NM. Timber. Moderate fire behavior with backing and creeping. Structures threatened. Road, area, and trail closures in effect. Precipitation occurred over the fire area yesterday. Last report unless significant activity occurs.

Dog Head, Cibola NF. Six miles northwest of Tajique, NM. Timber and medium logging slash. Minimal fire behavior. Road, area, and trail closures in effect.

* Peaks, Tonto NF. Ten miles northwest of Roosevelt, AZ. Chaparral and short grass. Moderate fire behavior with short uphill runs, backing, and smoldering. Structures threatened. Area closures in effect.

Burro, Apache-Sitgreaves NF. Twelve miles northwest of Mule Creek, NM. Brush and tall grass. No new information.

104, Las Vegas District, NM State Forestry. Fifteen miles north of Las Vegas, NM. Timber and short grass. No new information.

Wildcat, Kaibab NF. Twenty-six miles southeast of Jacob Lake, AZ. Chaparral and short grass. Last report unless new information is received.

* 1 Hectare = 2.47 Acres

Predictive Services Discussion: The thermal ridge over the Southwest will begin to redevelop and strengthen. This will mark the beginning of the next heat episode across the West. More weak bands of premonsoonal moisture will work their way north into Arizona and New Mexico, leading to more scattered thunderstorm activity. It appears the surge will produce a mix of wet and dry storms. Warm and dry conditions will return to the Great Basin, Pacific Northwest, and Northern Rockies with isolated afternoon storms possible from central Montana west to the coast. Cool, breezy, and dry conditions are expected from North Dakota southeast through the Ohio River Valley to the Mid-Atlantic Coast. Scattered strong thunderstorms will be possible along a stalled frontal boundary from Virginia into the deep southern states of Georgia and Alabama. In Alaska showers will continue along coastal areas, as a strong low pressure system remains stalled over the central Gulf of Alaska. Across the Interior, the chance for isolated wet storms will continue, along with breezy winds.

# Propane Tank Hazards 

Miscellaneous Fireline Hazards

Liquefied Propane Gas (LPG) tanks are commonly found in the wildland-urban interface and present hazards to firefighters in that environment. LPG tanks may be found in a number of other environments such as motor homes, travel trailers, grills, camp stoves, lanterns, etc. Directly attacking LPG tank fires is a structural fire task involving hazardous materials and should only be attempted by trained personnel using full structural personal protective equipment and equipped with a volume of water adequate to safely attack the fire.

- Boiling Liquid Expanding Vapor Explosions (BLEVE)
- The most recognized hazard with LPG tanks is BLEVE (Boiling Liquid Expanding Vapor Explosions) or sudden complete failure of the tank. Some training courses have directed responders to approach the tank from the sides, believing that the force of the explosion will occur on the ends of the tank. However, this is not a guarantee that you will be safe from projectiles or missiles from the explosion, as they may travel in ALL directions up to 2,500 feet away. Leave the area immediately if you smell propane; hear a rising sound from venting safety devices or see discoloration or deformation of the tank. If you leave the area, get at least 2,500 feet away and do not go down wind or down slope of the leaking propane. BLEVEs are a major hazard to emergency responders!
- Fuel Reduction Around Tanks
- Wildland firefighters may take action to prevent direct flame impingement on LPG tanks by removing wildland fuels in the area. However, be aware that lines from the tank to structures may be above or below ground, and may be cut by tools or equipment. Propane gas is heavier than air, and may move along the ground at some distance, and may ignited when in reaches open flame or another ignition source. Use extreme caution when doing fuels reduction around tanks, and flag any lines you encounter.

## - Other Wildland Fire Considerations

- Do not position engines or other apparatus near LPG tanks or downwind / down slope from tanks.
- Do not deploy fire shelters near LPG tanks or downwind / down slope from tanks.
- Cooling Tanks
- In light fuels such as grasses, where any heat exposure to the tank will be very limited, rapid application of cooling water on the outside of the tank above the liquid level can reduce the likelihood of container failure by lowering the external temperature of the shell of the exposed tank. Water should not be directed at the valve safety devices, due to the potential of "icing" the valve closed.
- In heavy fuels where long duration heat exposure to the LPG tank is likely, evacuate all personnel and equipment 2,500 feet away and not down slope or down wind. NFPA says that direct flame impingement protection requires water flow of at least 500 gpm from an unmanned monitor nozzle. This is a situation for properly trained, equipped and supported structural firefighters.
